Missouri’s first and only AACSB-accredited DBA program connects application of theory and leading academic research to real-world practice.

The UMSL Doctor of Business Administration program gives senior managers the knowledge and applied research tools to solve high-level business problems in their companies or industries. The DBA program will help candidates gain expertise in applied research by improving their methodological and analytical skills, through practical application of academic theory.

Accelerate your career without disrupting it

Missouri’s first and only AACSB-accredited DBA program connects application of theory and leading academic research to real-world practice.
The UMSL DBA is a three-year, cohort-based program that offers a flexible format, with limited monthly visits to campus. Over the course of the program, participants will make only three weekend trips to campus per term.

UMSL DBA students move through the program in a cohort and meet face-to-face one weekend a month, then engage and collaborate with faculty and students in the online learning platform for discussions. The first two years cover an array of cutting-edge business and management topics and the third year is spent focusing on the candidate’s dissertation research.

The UMSL DBA is designed to train engaged management scholars in a learning community supported by select internationally renowned faculty with close ties to business and recognized for their research impact and expertise in graduate education.

The UMSL DBA is a member of the Executive DBA Council, an international organization of executive-format doctoral degrees.

DBA Faculty Mentors

As a member of the University of Missouri–St. Louis DBA program, you will have the opportunity to work with some of our finest faculty as mentors and colleagues. DBA faculty are committed to educating practitioner-scholars who connect business theory to practice. They will guide you through the program and help you develop and focus research ideas to satisfy your intellectual curiosity. During your program, you will be challenged to review the body of literature relevant to your interests, develop research questions, undertake original, applied research and present and publish your findings.
