

The Jacksonville District of the Corps of Engineers has an entry-level job opportunity for economists. We're interested in graduates with bachelors and masters degrees, and plan to hire three people under this announcement (see the link to the advertisement on USA Jobs below). We would appreciate it if you would send this announcement forward to your students and recent graduates.

About us: The Corps of Engineers is a federal agency that develops large-scale water resource projects for the nation. Our district does flood control, beach protection, navigation, and ecosystem restoration projects.

Economists here do benefit-cost analyses on project proposals in these four areas to determine which are the best federal investments.

We have the largest ecosystem restoration program in the country. The opportunity for economists to help plan and select multi-billion dollar restoration projects for implementation is unique to our agency. We also have a healthy navigation economics program, with deep draft navigation projects including Tampa and Jacksonville Harbors, as well as Port Everglades.

We are located in downtown Jacksonville in the Prudential building, across from the St. John's River. As a federal agency we offer excellent benefits to our employees. We often fund students who wish to continue their education. Jacksonville is a beautiful city located less than 30 minutes from outstanding beaches, and less than an hour from St. Augustine, the oldest city in America.

Applications must be received by 28 April 2008. If you have any questions, please don't hesitate to call. Thanks very much.

Mike Holland
Chief, Socioeconomics Branch
Jacksonville District
U.S. Army Corps of Engineers
