

CS Computing Club

Debugging in Eclipse

Programmers often spend more time debugging code than writing the code itself. Yet we often spend relatively little time discussing how to go about debugging code. The Computing Club will be hosting a meeting covering debugging techniques to help remedy this.

The talk will begin with a presentation of debugging techniques using Eclipse in C++. This will be followed by a discussion of some common security problems that can crop up in C/C++ code.

Meeting and Talk: 3/21/2017

The talk and meeting will be held on Tuesday, March 21st, 2017 in ESH 304 from 1-3pm.

This meeting is open to all students of UMSL with interest in debugging and computing in general. The talk should be understandable for anyone with an introductory knowledge of C or C++.

Refreshments will be provided.
