Preparing for OPC17

Every year our department has an open programming competition. This programming competition is in C, C++ or Java and uses the student Delmar server for submissions. While the competition is tailored to problems at the level of CS2250, it does require use of command-line options and submission in the Unix environment.

At this event we will be covering the basics of command-line options in Unix for C, C++ and Java, as well as command line compilation in these languages. We will then discuss how to approach solving these problems, taking as our examples the problems given in last year’s competition.

Workshop: 5/04/2017

The talk and meeting will be held on Thursday, May 4th, 2017 in ESH 304 from 1-3pm.

This meeting is open to all students of UMSL with interest in competing in the programming competition. The topics should be understandable for anyone with an introductory knowledge of C or C++ or Java.

Refreshments will be provided.
