qualities include members of the clergy, social workers, psychologists, physicians and surgeons, and other health diagnosing and treating practitioners.

### Human Resources, Training, and Labor Relations Managers and Specialists

**(O*NET 11-3041.00, 11-3042.00, 11-3049.99, 13-1071.01, 13-1071.02, 13-1072.00, 13-1073.00)**

#### Significant Points

- Employers usually seek college graduates for entry-level jobs.

- Depending on the particular job, a strong background in human resources, business, technical, or liberal arts subjects may be preferred.

- Keen competition for jobs is expected due to the abundant supply of qualified college graduates and experienced workers.

#### Nature of the Work

Attracting the most qualified employees and matching them to the jobs for which they are best suited is important for the success of any organization. However, many enterprises are too large to permit close contact between top management and employees. Human resources, training, and labor relations managers and specialists provide this link. In the past, these workers have been associated with performing the administrative function of an organization, such as handling employee benefits questions or recruiting, interviewing, and hiring new personnel in accordance with policies and requirements that have been established in conjunction with top management. Today’s human resources workers juggle these tasks and, increasingly, consult top executives regarding strategic planning. They have moved from behind-the-scenes staff work to leading the company in suggesting and changing policies. Senior management is recognizing the importance of the human resources department to their bottom line.

In an effort to improve morale and productivity and limit job turnover, they also help their firms effectively use employee skills, provide training opportunities to enhance those skills, and boost employee satisfaction with their jobs and working conditions. Although some jobs in the human resources field require only limited contact with people outside the office, dealing with people is an essential part of the job.

In a small organization, a human resources generalist may handle all aspects of human resources work, requiring a broad range of knowledge. The responsibilities of human resources generalists can vary widely, depending on their employer’s needs. In a large corporation, the top human resources executive usually develops and coordinates personnel programs and policies. (Executives are included in the Handbook statement on top executives.) These policies are usually implemented by a director or manager of human resources and, in some cases, a director of industrial relations.

The director of human resources may oversee several departments, each headed by an experienced manager, who most likely specializes in one personnel activity such as employment, compensation, benefits, training and development, or employee relations.

Employment and placement managers oversee the hiring and separation of employees and supervise various workers, including equal employment opportunity specialists and recruitment specialists. Employment, recruitment, and placement specialists recruit and place workers.

Recruiters maintain contacts within the community and may travel extensively, often to college campuses, to search for promising job applicants. Recruiters screen, interview, and sometimes test applicants. They also may check references and extend job offers. These workers must be thoroughly familiar with the organization and its personnel policies to discuss wages, working conditions, and promotional opportunities with prospective employees. They also must keep informed about equal employment opportunity (EEO) and affirmative action guidelines and laws, such as the Americans with Disabilities Act.

EEO officers, representatives, or affirmative action coordinators handle this area in large organizations. They investigate and resolve EEO grievances, examine corporate practices for possible violations, and compile and submit EEO statistical reports.

Employer relations representatives, who usually work in government agencies, maintain working relationships with local employers and promote the use of public employment programs and services. Similarly, employment interviewers—whose many job titles include personnel consultants, personnel development specialists, and human resources coordinators—help match employers with qualified job seekers.

Compensation, benefits, and job analysis specialists conduct programs for employers and may specialize in specific areas such as position classifications or pensions. Job analysts, sometimes called position classifiers, collect and examine detailed information about job duties to prepare job descriptions. These descriptions explain the duties, training, and skills each job requires. Whenever a large organization introduces a new job or reviews existing jobs, it calls upon the expert knowledge of the job analyst.

Occupational analysts conduct research, usually in large firms. They are concerned with occupational classification systems and study the effects of industry and occupational trends upon worker relationships. They may serve as technical liaison between the firm and industry, government, and labor unions.

Establishing and maintaining a firm’s pay system is the principal job of the compensation manager. Assisted by staff specialists, compensation managers devise ways to ensure fair and equitable pay rates. They may conduct surveys to see how their rates compare with others and to see that the firm’s pay scale complies with changing laws and regulations. In addition, compensation managers often oversee their firm’s performance evaluation system, and they may design reward systems such as pay-for-performance plans.

Employee benefits managers and specialists handle the company’s employee benefits program, notably its health insurance and pension plans. Expertise in designing and administering benefits programs continues to gain importance as employer-provided
benefits account for a growing proportion of overall compensation costs, and as benefit plans increase in number and complexity. For example, pension benefits might include savings and thrift, profit sharing, and stock ownership plans; health benefits may include long-term catastrophic illness insurance and dental insurance. Familiarity with health benefits is a top priority, as more firms struggle to cope with the rising cost of health care for employees and retirees. In addition to health insurance and pension coverage, some firms offer employees life and accidental death and dismemberment insurance, disability insurance, and relatively new benefits designed to meet the needs of a changing work force, such as parental leave, child and elder care, long-term nursing home care insurance, employee assistance and wellness programs, and flexible benefits plans. Benefits managers must keep abreast of changing Federal and State regulations and legislation that may affect employee benefits.

Employee assistance plan managers, also called employee welfare managers, are responsible for a wide array of programs covering occupational safety and health standards and practices; health promotion and physical fitness, medical examinations, and minor health treatment, such as first aid; plant security; publications; food service and recreation activities; car pooling and transportation programs, such as transit subsidies; employee suggestion systems; childcare and elder care; and counseling services. Child care and elder care are increasingly important due to growth in the number of dual-income households and the elderly population. Counseling may help employees deal with emotional disorders, alcoholism, or marital, family, consumer, legal, and financial problems. Some employers offer career counseling as well. In large firms, certain programs, such as security and safety, may be in separate departments headed by other managers.

Training and development managers and specialists conduct and supervise training and development programs for employees. Increasingly, management recognizes that training offers a way of developing skills, enhancing productivity and quality of work, and building loyalty to the firm. Training is widely accepted as a method of improving employee morale, but this is only one of the reasons for its growing importance. Other factors include the complexity of the work environment, the rapid pace of organizational and technological change, and the growing number of jobs in fields that constantly generate new knowledge. In addition, advances in learning theory have provided insights into how adults learn, and how training can be organized most effectively for them.

Training specialists plan, organize, and direct a wide range of training activities. Trainers conduct orientation sessions and arrange on-the-job training for new employees. They help rank-and-file workers maintain and improve their job skills, and possibly prepare for jobs requiring greater skill. They help supervisors improve their interpersonal skills in order to deal effectively with employees. They may set up individualized training plans to strengthen an employee’s existing skills or teach new ones. Training specialists in some companies set up leadership or executive development programs among employees in lower level positions. These programs are designed to develop potential and current executives to replace those retiring. Trainers also lead programs to assist employees with transitions due to mergers and acquisitions, as well as technological changes. In government-supported training programs, training specialists function as case managers. They first assess the training needs of clients, then guide them through the most appropriate training method. After training, clients either may be referred to employer relations representatives or receive job placement assistance.

Planning and program development is an important part of the training specialist’s job. In order to identify and assess training needs within the firm, trainers may confer with managers and supervisors or conduct surveys. They also periodically evaluate training effectiveness.

Depending on the size, goals, and nature of the organization, trainers may differ considerably in their responsibilities and in the methods they use. Training methods include on-the-job training; schools in which shop conditions are duplicated for trainees prior to putting them on the shop floor; apprenticeship training; classroom training; and electronic learning, which may involve interactive Internet-based training, multimedia programs, distance learning, satellite training, videos and other computer-aided instructional technologies, simulators, conferences, and workshops.

The director of industrial relations forms labor policy, oversees industrial labor relations, negotiates collective bargaining agreements, and coordinates grievance procedures to handle complaints resulting from disputes with unionized employees. The director of industrial relations also advises and collaborates with the director of human resources, other managers, and members of their staff, because all aspects of personnel policy—such as wages, benefits, pensions, and work practices—may be involved in drawing up a new or revised contract.

Labor relations managers and their staffs implement industrial labor relations programs. When a collective bargaining agreement is up for negotiation, labor relations specialists prepare information for management to use during negotiation, which requires familiarity with economic and wage data as well as extensive knowledge of labor law and collective bargaining trends. The labor relations staff interprets and administers the contract with respect to grievances, wages and salaries, employee welfare, health care, pensions, union and management practices, and other contractual stipulations. As union membership is continuing to decline in most industries, industrial relations personnel are working more with employees who are not members of a labor union.

Dispute resolution—attaining tacit or contractual agreements—has become increasingly important as parties to a dispute attempt
to avoid costly litigation, strikes, or other disruptions. Dispute resolution also has become more complex, involving employees, management, unions, other firms, and government agencies. Specialists involved in dispute resolution must be highly knowledgeable and experienced, and often report to the director of industrial relations. Conciliators, or mediators, advise and counsel labor and management to prevent and, when necessary, resolve disputes over labor agreements or other labor relation’s issues. Arbitrators, sometimes called umpires or referees, decide disputes that bind both labor and management to specific terms and conditions of labor contracts. Labor relations specialists who work for unions perform many of the same functions on behalf of the union and its members.

Other emerging specialists include international human resources managers, who handle human resources issues related to a company’s foreign operations, and human resources information system specialists, who develop and apply computer programs to process personnel information, match job seekers with job openings, and handle other personnel matters.

### Working Conditions

Personnel work usually takes place in clean, pleasant, and comfortable office settings. Arbitrators and mediators may work out of their homes. Many human resources, training, and labor relations managers and specialists work a standard 35- to 40-hour week. However, longer hours might be necessary for some workers—for example, labor relations managers and specialists, arbitrators, and mediators—when contract agreements are being prepared and negotiated.

Although most human resources, training, and labor relations managers and specialists work in the office, some travel extensively. For example, recruiters regularly attend professional meetings and visit college campuses to interview prospective employees; arbitrators and mediators often must travel to the site chosen for negotiations.

### Employment

Human resources, training, and labor relations managers and specialists held about 709,000 jobs in 2000. The following tabulation shows the distribution of jobs by occupational specialty:

<table>
<thead>
<tr>
<th>Occupational Specialty</th>
<th>Number of Jobs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Human resources managers</td>
<td>219,000</td>
</tr>
<tr>
<td>Training and development specialists</td>
<td>204,000</td>
</tr>
<tr>
<td>Employment, recruitment, and placement specialists</td>
<td>199,000</td>
</tr>
<tr>
<td>Compensation, benefits, and job analysis specialists</td>
<td>87,000</td>
</tr>
</tbody>
</table>

Human resources, training, and labor relations managers and specialists were employed in virtually every industry. About 21,000 specialists were self-employed, working as consultants to public and private employers.

The private sector accounted for about 90 percent of salaried jobs. Among these salaried jobs, services industries—including business, health, social, management, and educational services—accounted for about 46 percent of jobs; personnel supply services, the largest employer among specific services industries, accounted for almost 10 percent of those. Manufacturing industries accounted for nearly 13 percent of salaried jobs; while finance, insurance, and real estate firms accounted for about 11 percent of jobs.

Federal, State, and local governments employed about 11 percent of human resources managers and specialists. They handled the recruitment, interviewing, job classification, training, salary administration, benefits, employee relations, and related matters of the Nation’s public employees.

### Training, Other Qualifications, and Advancement

Because of the diversity of duties and level of responsibility, the educational backgrounds of human resources, training, and labor relations managers and specialists vary considerably. In filling entry-level jobs, employers usually seek college graduates. Many prefer applicants who have majored in human resources, personnel administration, or industrial and labor relations. Others look for college graduates with a technical or business background or a well-rounded liberal arts education.

Many colleges and universities have programs leading to a degree in personnel, human resources, or labor relations. Some offer degree programs in personnel administration or human resources management, training and development, or compensation and benefits. Depending on the school, courses leading to a career in human resources management may be found in departments of business administration, education, instructional technology, organizational development, human services, communication, or public administration, or within a separate human resources institution or department.

Because an interdisciplinary background is appropriate in this field, a combination of courses in the social sciences, business, and behavioral sciences is useful. Some jobs may require a more technical or specialized background in engineering, science, finance, or law, for example. Most prospective human resources specialists should take courses in compensation, recruitment, training and development, and performance appraisal, as well as courses in principles of management, organizational structure, and industrial psychology. Other relevant courses include business administration, public administration, psychology, sociology, political science, economics, and statistics. Courses in labor law, collective bargaining, labor economics, labor history, and industrial psychology also provide a valuable background for the prospective labor relations specialist. As in many other fields, knowledge of computers and information systems also is useful.

An advanced degree is increasingly important for some jobs. Many labor relations jobs require graduate study in industrial or labor relations. A strong background in industrial relations and law is highly desirable for contract negotiators, mediators, and arbitrators; in fact, many people in these specialties are lawyers. A background in law also is desirable for employee benefits managers and others who must interpret the growing number of laws and regulations. A master’s degree in human resources, labor relations, or in business administration with a concentration in human resources management is highly recommended for those seeking general and top management positions.

For many specialized jobs in the human resources field, previous experience is an asset; for more advanced positions, including managers as well as arbitrators and mediators, it is essential. Many employers prefer entry-level workers who have gained some experience through an internship or work-study program while in school. Personnel administration and human resources development require the ability to work with individuals as well as a commitment to organizational goals. This field also demands other skills people may develop elsewhere—using computers, selling, teaching, supervising, and volunteering, among others. This field offers clerical workers opportunities for advancement to professional positions. Responsible positions sometimes are filled by experienced individuals from other fields, including business, government, education, social services administration, and the military.

The human resources field demands a range of personal qualities and skills. Human resources, training, and labor relations managers and specialists must speak and write effectively. The growing diversity of the workforce requires that they work with or supervise people with various cultural backgrounds, levels of education, and experience. They must be able to cope with conflicting points of
view, function under pressure, and demonstrate discretion, integrity, fair-mindedness, and a persuasive, congenial personality.

The duties given to entry-level workers will vary depending on whether they have a degree in human resource management, have completed an internship, or have some other type of human resources-related experience. Entry-level employees commonly learn the profession by performing administrative duties—helping to enter data into computer systems, compiling employee handbooks, researching information for a supervisor, or answering the phone and handling routine questions. Entry-level workers often enter formal or on-the-job training programs in which they learn how to classify jobs, interview applicants, or administer employee benefits. They then are assigned to specific areas in the personnel department to gain experience. Later, they may advance to a managerial position, overseeing a major element of the personnel program—compensation or training, for example.

Exceptional human resources workers may be promoted to director of personnel or industrial relations, which can eventually lead to a top managerial or executive position. Others may join a consulting firm or open their own business. A Ph.D. is an asset for teaching, writing, or consulting work.

Most organizations specializing in human resources offer classes intended to enhance the marketable skills of their members. Some organizations offer certification programs, which are signs of competence and can enhance one's advancement opportunities. For example, the International Foundation of Employee Benefit Plans confers the Certified Employee Benefit Specialist designation to persons who complete a series of college-level courses and pass exams covering employee benefit plans. The Society for Human Resources Management has two levels of certification—Professional in Human Resources, and Senior Professional in Human Resources; both require experience and a comprehensive exam.

**Job Outlook**

The abundant supply of qualified college graduates and experienced workers should create keen competition for jobs. Overall employment of human resources, training, and labor relations managers and specialists is expected to grow about as fast as the average for all occupations through 2010. In addition to openings due to growth, many job openings will arise from the need to replace workers who transfer to other occupations or leave the labor force.

Legislation and court rulings setting standards in various areas—occupational safety and health, equal employment opportunity, wages, health, pension, and family leave, among others—will increase demand for human resources, training, and labor relations experts. Rising health care costs should continue to spur demand for specialists to develop creative compensation and benefits packages that firms can offer prospective employees. Employment of labor relations staff, including arbitrators and mediators, should grow as firms become more involved in labor relations, and attempt to resolve potentially costly labor-management disputes out of court. Additional job growth may stem from increasing demand for specialists in international human resources management and human resources information systems.

Expected job growth varies by specialty. Many new jobs will stem from increasing efforts throughout industry to recruit and retain quality employees. As a result, employment, recruitment, and placement specialists are projected to grow as fast as average. Furthermore, employers are expected to devote greater resources to job-specific training programs in response to the increasing complexity of many jobs, the aging of the work force, and technological advances that can leave employees with obsolete skills. This should result in particularly strong demand for training and development specialists across all industries.

Demand should continue to be strong among firms involved in management, consulting, and personnel supply, as businesses increasingly contract out personnel functions or hire personnel specialists on a temporary basis to meet the increasing cost and complexity of training and development programs. Demand also should increase in firms that develop and administer complex employee benefits and compensation packages for other organizations.

Demand for human resources, training, and labor relations managers and specialists also is governed by the staffing needs of the firms for which they work. A rapidly expanding business is likely to hire additional human resources workers—either as permanent employees or consultants—while a business that has experienced a merger or a reduction in its workforce will require fewer human resources workers. Also, as human resources management becomes increasingly important to the success of an organization, some small and medium-size businesses that do not have a human resources department may assign employees various human resources duties together with other unrelated responsibilities. In any particular firm, the size and the job duties of the human resources staff are determined by the firm’s organizational philosophy and goals, skills of its work force, pace of technological change, government regulations, collective bargaining agreements, standards of professional practice, and labor market conditions.

Job growth could be limited by the widespread use of computerized human resources information systems that make workers more productive. Similar to other workers, employment of human resources, training, and labor relations managers and specialists, particularly in larger firms, may be adversely affected by corporate downsizing, restructurings, and mergers.

**Earnings**

Annual salary rates for human resources workers vary according to occupation, level of experience, training, location, and size of the firm, and whether they are union members. Median annual earnings of human resources managers were $59,000 in 2000. The middle 50 percent earned between $43,600 and $80,390. The lowest 10 percent earned less than $33,360, and the highest 10 percent earned more than $104,020. Median annual earnings in the industries employing the largest numbers of human resources managers in 2000 were:

- Computer and data processing services .................. $75,140
- Telephone communication ......................................... 71,340
- Local government .................................................... 61,730
- Management and public relations .............................. 57,240
- Hospitals ........................................................................ 55,490

Median annual earnings of training and development specialists were $40,830 in 2000. The middle 50 percent earned between $30,450 and $54,390. The lowest 10 percent earned less than $23,520, and the highest 10 percent earned more than $69,230. Median annual earnings in the industries employing the largest numbers of training and development specialists in 2000 were:

- Computer and data processing services .................. $48,660
- Hospitals .............................................................. 44,460
- Local government .................................................... 41,800
- State government ....................................................... 39,960
- Commercial banks .................................................. 36,070

Median annual earnings of employment, recruitment, and placement specialists were $36,480 in 2000. The middle 50 percent earned between $28,040 and $51,500. The lowest 10 percent earned less than $22,520, and the highest 10 percent earned more than $71,040. Median annual earnings in 2000 in personnel supply services, the industry employing the largest numbers of employment, recruitment, and placement specialists, were $34,680.
Industrial Production Managers

**O*NET 11-3051.00**

**Significant Points**

- While there is no standard preparation, a college degree is required.
- Applicants with a college degree in industrial engineering, management, or business administration, and particularly those with an undergraduate engineering degree and a master’s degree in business administration or industrial management, enjoy the best job prospects.
- Projected slower-than-average growth in employment reflects increasing productivity.

**Nature of the Work**

Industrial production managers coordinate the resources and activities required to produce millions of goods every year in the United States. Although their duties vary from plant to plant, industrial production managers share many of the same major responsibilities. These responsibilities include production scheduling, staffing, procurement and maintenance of equipment, quality control, inventory control, and the coordination of production activities with those of other departments.

The primary mission of industrial production managers is planning the production schedule within budgetary limitations and time constraints. They do this by analyzing the plant’s personnel and capital resources to select the best way of meeting the production quota. Industrial production managers determine, often using mathematical formulas, which machines will be used, whether new machines need to be purchased, whether overtime or extra shifts are necessary, and what the sequence of production will be. They monitor the production run to make sure that it stays on schedule and correct any problems that may arise.

Industrial production managers also must monitor product standards. When quality drops below the established standard, they must determine why standards are not being maintained and how to improve the product. If the problem relates to the quality of work performed in the plant, the manager may implement better training programs, reorganize the manufacturing process, or institute employee suggestion or involvement programs. If the cause is substandard materials, the manager works with the purchasing department to improve the quality of the product’s components.

Because the work of many departments is interrelated, managers work closely with heads of other departments such as sales, procurement, and logistics to plan and implement company goals, policies, and procedures. For example, the production manager works with the procurement department to ensure that plant inventories are maintained at their optimal level. This is vital to a firm’s operation because maintaining the inventory of materials necessary for production ties up the firm’s financial resources, yet insufficient quantities cause delays in production. A breakdown in communications between the production manager and the purchasing department can cause slowdowns and a failure to meet production schedules. Just-in-time production techniques have reduced inven-
