Language requirement vote expected in February

Terence Jones

"Better ways to obtain culture".

"Give both sides a fair hearing."

by Bill Townsend

The fate of the controversial foreign language requirement will not be decided at least February. The nine-member curriculum committee of the College of Arts and Sciences will make a recommendation to the college and then the college will vote to either keep the requirement, abolish it altogether, or to substitute an alternative.

A two-hour session with a panel of speakers specializing in these topics will be devoted to the requirement. The session will be held at 10:40 a.m. on Tuesday in Ives Hall.

The forum is the subject of a day-long forum to be held on Wednesday, Nov. 14, in the J.C. Penney Auditorium. The forum will consist of three-hour sessions with a panel of speakers specializing in these topics and a moderator. After individual presentations, the floor will be open to discussion between the audience and the panel of speakers.

The first seminar will deal with the topic of "Race and Intelligence." The guest speakers are: Professor Clyde Noble, Department of Psychology, University of Georgia; Professor Lloyd Humphreys, Department of Psychology, University of Illinois; Stephen Gould, Associate Professor of Biology, Harvard University; and Robert Williams, Professor of Psychology, Washington University. These speakers represent differing views on hereditary intelligence and its relation to race.

The seminar will be held at 10:40. The second seminar, to be held at 1:00, the guest speakers are: Trudy Rader, Professor of Economics, Washington University; Norton Long, Professor of Political Science, Director of Center for Community and Metropolitan Studies, UMSL; William Harrison, Continuing Education, Washington University; and Paul Roberts, Assistant Professor of Philosophy, UMSL. Differing viewpoints on the issue of poverty, its causes and continuity, will be presented by these speakers.

The application of theories concerning poverty and intelligence will be discussed in the third seminar on "Racism and Education." The guest speakers are: Harrell Rogers, Associate Professor of Political Science, UMSL; James Riley, Social Science, Forest Park Community College; and various speakers with 10 tests used to track students, and the UMSL admissions policy. Such issues as school segregation, achievement, tracking and admission exams will be discussed by the various educators, administrators, and students. Special attention will be given to the UMSL admissions policy. The seminar will be held at 12:40 (See Commentary Page 8).

The forum is being sponsored by the University Program Board and co-sponsored by the Department of Philosophy. Many of the speakers will also be participating in a similar forum being held at Washington University that day.

Poverty, admissions exams discussed at race forum

The interrelation of race, poverty, and education is the subject of a day-long forum to be held on Wednesday, Nov. 14, in the J.C. Penney Auditorium. The forum will consist of three-hour sessions with a panel of speakers specializing in these topics and a moderator. After individual presentations, the floor will be open to discussion between the audience and the panel of speakers.

The first seminar will deal with the topic of "Race and Intelligence." The guest speakers are: Professor Clyde Noble, Department of Psychology, University of Georgia; Professor Lloyd Humphreys, Department of Psychology, University of Illinois; Stephen Gould, Associate Professor of Biology, Harvard University; and Robert Williams, Professor of Psychology, Washington University. These speakers represent differing views on hereditary intelligence and its relation to race.

The seminar will be held at 10:40. The second seminar, to be held at 1:00, the guest speakers are: Trudy Rader, Professor of Economics, Washington University; Norton Long, Professor of Political Science, Director of Center for Community and Metropolitan Studies, UMSL; William Harrison, Continuing Education, Washington University; and Paul Roberts, Assistant Professor of Philosophy, UMSL. Differing viewpoints on the issue of poverty, its causes and continuity, will be presented by these speakers.

Such issues as school segregation, achievement, tracking and admission exams will be discussed by the various educators, administrators, and students. Special attention will be given to the UMSL admissions policy. The seminar will be held at 12:40 (See Commentary Page 8).

The forum is being sponsored by the University Program Board and co-sponsored by the Department of Philosophy. Many of the speakers will also be participating in a similar forum being held at Washington University that day.
Professor Corey released from hospital

by Bill Townsend

Eugene R. Corey, associate professor in chemistry, was released from hospital suffering from carbon monoxide poisoning.

Charles Armbruster, chairman of the Chemistry Department, said Corey had made "great progress" in the past week.

Armbruster reported that though Corey was still weak from the ordeal, he was able to walk under his own power. "He has only one major problem," said Armbruster. "He can't use his left arm and hand.

To help alleviate the problem, Corey will go to the hospital for physical therapy every Tuesday and Thursday. Armbruster said.

Corey told Armbruster on Sunday he remembered waking up with a splitting headache at 3:30 am Thursday, Oct. 25, the day of the incident.

"He went to the bathroom to get some aspirin and when he came out he saw his cat lying dead. That was the last thing he told me he remembered. Then, evidently, he collapsed," said Armbruster.

The fumes which asphyxiated Corey came from the car of the late David Foley, who lived in the duplex where Corey and his wife Joyce reside, 80 Belleville Acres, Bel Nor. The fumes evidently seeped up into the Corey apartment. According to police, the car, which was in the closed garage, had been running all Wednesday night and early Thursday morning. Foley was found dead in the car at about 1:00 pm Thursday, police said.

The St. Louis County Medical examiner still has not determined the cause of death.

Corey, too, was found by police at about 1:00 pm. He was rushed to the hospital immediately.

Mrs. Corey, also an associate professor of chemistry, was attending a meeting at Kansas University in Lawrence. When told of her husband's condition by Armbruster, she got on the next plane to St. Louis. She met Armbruster at the airport and the two arrived at the hospital at about 5:00 pm.

Columbia law dean coming

Law Dean Jack Edwards, of the University of Missouri-Columbia, will meet with pre-law students on Tuesday, Nov. 13, in Room 72, J.C. Penney Building, from 2:30-3:00 pm and again from 7:00-8:00 pm.

Though these sessions are intended primarily to help senior pre-law students clarify the problems of securing admissions to Law Schools, including UMC, the sessions are open to all students interested in becoming lawyers.

Edwards has visited UMSL annually for several years and students have discovered him to be an excellent source of pertinent information. As in the past, the Dean will spend much of the time replying to general and specific questions regarding Law Schools.

Students should feel free to drop in for as long as they wish. Past meetings with Edwards have demonstrated that students have a great deal to learn from questions asked by fellow students as well as their own.

Philosophy courses described

The Philosophy Department has produced a booklet that describes in detail each section of each course taught next semester. Copies are available in room 259 Lucas Hall. Copies may be examined at the University Center information desk.

Grant used to study genetics

Gary T. Heberlein, a biologist at UMSL, has been awarded a $57,556 grant by the National Cancer Institute (National Institutes of Health) to continue study of the genetics and biochemistry of tumor induction.

Heberlein, an associate professor of biology, said the research is concerned with the identification of the specific genes and their products involved in the changing of normal cells to tumor cells. He said the study is concentrated on the examination of the only bacteria known to induce tumors in plants.
Reserved parking
incentive for car pools

by Mary Vernille

Students who participate in car pools of three people or more are now getting a special bonus-reserved parking at UMSL.

Twenty-seven spots are reserved from 7 a.m. to 1:30 p.m. in the parking area in front of the first parking garage by the student center, but only twenty-four are being served from 7 a.m. to 1:30 p.m. in the center, but only twenty-four

Credit transfer OK'd for Missouri campuses

by Walt Jaschek

A four-point policy designed to smooth the operation of transferring between the campuses of the University of Missouri was recently accepted by the University’s Board of Curators.

The plan allows grades, honor points, and course credits to transfer freely from one campus to the next.

Originally drawn up by the university intercampus Faculty Council, the policy was approved by the faculties on the St. Louis, Kansas City, and Rolla campuses.

The plan, which takes effect immediately, has the following four points:

1. Any course that leads to an undergraduate degree on any campus of the University of Missouri shall be accepted in transfer toward the same degree on each campus of the university offering said degree. Grades and honor points earned in such transfer courses shall also transfer, and shall be included in the accumulative point averages of the transferring students.

2. Each campus shall identify in its catalog an office on the campus which will furnish to students necessary information about degree and major requirements in force at other campuses of the University of Missouri.

3. A student who begins his work at a campus of the University of Missouri, then transfers to another campus shall be treated as any other transfer student from a campus outside the University of Missouri.

4. There shall be a faculty transfer review board (with faculty, student, and administrative members) established on each campus by the appropriate faculty governing body to hear student appeals for transfer of credits, grades, and honor points; to recommend relief if deemed appropriate; and to assist in the even-handed application of the philosophy underlying the above policies.

The new policy will significantly effect the approximately 1,000 students that transfer between the campuses each year.

Course evaluation available

The results of the Central Council’s course evaluation study are available to students registering for courses this week and next week. Central Council representatives are at tables on the third floor of Jesse Hall and on the second floor of the Business and Education Building to answer students’ questions about winter semester courses.

If a man does not keep pace
with his companions, perhaps
it is because he hears a different
drummer. Let him step to the
music which he hears, however
measured or far away. Thoreau

Applications for editor of the UMSL Current will be accepted by the Student Publications Committee until November 16, 1973. Written applications should be submitted to the Student Activities Office, Room 262, University Center. Applicants will be interviewed by the Publications Committee.

The editor selected in December will serve a term of one semester from January 1 to June 30, 1974.
Indian bones viewed in Illinois

by Dave Racowsky

The Anthropology, Sociology Department sponsored its first archaeology field trip to the Dickson Mounds site in Illinois. Led by Lloyd Collins, associate professor of Anthropology, and Dave Racowsky, anthropology lab instructor, thirty-eight UMSL students went by chartered coach to the site on Sunday, Oct. 26.

Located fifty miles north of Springfield, this area of Illinois has long been known for its archaeological richness and continues to add significantly to a better understanding of prehistoric man.

The Dickson Mounds Museum is a museum of anthropology which emphasizes the American Indian during prehistoric times. In addition to the museum buildings, thirty-eight acres have been set aside as an archaeological preserve. The exhibits in the museum building start with the earliest evidence of prehistoric man in the New World and continue with the successive cultural periods comprised of the Archaic, Woodland and Mississippian Cultural periods. These exhibits of stone artifacts, ceramics, and human pathology are also presented.

The Dickson Mounds cemetery, a portion of which is exhibited, is of the Mississippian period (about 1,000 years ago). There are 234 skeletons, which were unearthed by the Dicksons, on display showing singular and mass burials. Accompanying many of these interments are artifacts that were placed there by the Indians as grave offerings.

During the past few years archaeologists from the Illinois State Museum excavated and removed 806 other burials and have determined that the average life span was about twenty-four years. A high infant mortality rate and diseases affected this population recognizable from the numerous examples of bone diseases, arthritis, osteomyelitis, rickets, tumors, and pyorrhea. These Indians resided in a village just north of the cemetery. They practiced some farming, raised maize, beans and squash and also depended heavily on hunting mammals and birds, fishing and collecting mussels and wild plant foods. This type of subsistence economy allowed these people to live in one place during most of the year, which resulted in larger villages with more permanent dwellings. Along with the increase in technological and religious activities, came an increase in the number and variety of tools, ornaments and religious items. The bow and arrow was introduced about this time, making hunting more efficient.

These people traded for raw materials which were obtained from as far away as the Rocky Mountains, Obsidian from Wyoming, mica from the Smoky Mountains, alligator and shark teeth and seashells from the Gulf, and clams and minerals from a variety of places were some of the items for which they traded.

Collins said, "The current archaeological research in the Central Illinois River Valley is very important. As in most areas, evidences of prehistoric man are being destroyed at a rate much faster than necessary funds and qualified personnel can be made available for their recovery and preservation."

How do you see yourself?
As an individual or a digit?

You're an individual, of course. So
The Christian Science Monitor is for you.
It's written for individuals, by individuals—
more than 300 of them, reporting from 26 news
capitals of the world and all 50 United States.
The Monitor gives you the facts to base your
decisions on. It offers solutions, not just
problems. The individuals who write for the
Monitor care about what you care about—the
environment, government, the world. And you.

Decide for yourself. As a full-time college
student you get 25% off the regular price.
Which puts the Monitor in your mailbox every
day for just over 8¢ a copy.

ERA will benefit men and children

by Yvonne Rehg

Has the American woman been placed on a pedestal or in shackles? Some may consider both opinions extreme, but it is the polarization of these opinions that has prompted considerable controversy over the Equal Rights Amendment (ERA).

According to Neiderlander, this similar attitude toward women is expressed in support laws. Neiderlander's ideas conflict with the views of Phyllis Schlafly, head of the Stop ERA movement, who has defined support laws as an outgrowth of Christian charity and love. Neiderlander, on the other hand said, "The support laws are an outgrowth of English society where women become the property of their husband upon marriage. Support laws are an outgrowth of slavery."

When asked if support laws do in some ways help women, Neiderlander replied that the State statute concerning support of the wife merely says that a man must support his wife and children adequately. The husband has the right to decide what adequate support is, and if a woman does not feel that she is being sufficiently provided for, the only legal action she can take against her husband is to file for separate maintenance or divorce.

Neiderlander said, "The Equal Rights Amendment, if ratified, would provide justice not only for women, but also for men, for children, and for the unborn."

According to Neiderlander, educational opportunities would also be opened to both sexes by ERA. Neiderlander said that there may be many men who could greatly benefit from learning how to cook or there may be women who could benefit by skills in woodworking or auto mechanics. These skills would improve both sexes' job opportunities after leaving reformatory institutions.

In situations where the husband is self-employed and pays his wife a salary for her labor, for him, the wife will not receive benefits under social security. She can only collect from her husband's benefits, and vice versa.

Discrimination is reversed when a woman is providing one half or more of the family's support. If the wife dies after providing such support, the husband cannot collect from her wife's benefits as she can from his. Often this man is then dependent upon welfare.

Children would be affected under the Social Security benefits if ERA was ratified. Presently, if a woman had worked, but has been out of the labor force for more than a year and a half at the time of her death, her children would not be protected by her Social Security benefits no matter how long she had worked previous to quitting. The same restriction does not apply to men.

During her presentation, Neiderlander said that poor women, especially welfare recipients, would gain from ratification of ERA. She said there is a government sponsored program called WIN, that discriminates against women. The purpose of the program is to help welfare recipients gain skills needed for employment. Men are given preference in this program because only women with child care facilities can presently participate. "ERA would forbid such practices," said Neiderlander.

It is inequalities like these that Neiderlander would like to see changed, not only for the sake of women, but also for their husband's and children's sake.

Poll shows Nixon should go

by Carolyn Carter

A recent random polling of the UMSL student body and faculty brought some interesting views. The issues were the impeachment of President Nixon and the Middle East crisis. The overall outcome of those polled showed the majority of both the student body and faculty were in favor of impeaching President Nixon with a resolution calling on the United States to remain as uninvolved as possible in the Middle East crisis.

Most of the student body when asked the question, "Do you feel President Nixon should be impeached?", responded with a quick yes. Most often the students held very little sympathy for the pressures and tensions the Watergate occurrence has inflicted on the president. One student pointed out, "I blame Nixon himself for his own downfall."

The predominant student opinion concerning the Watergate situation was, if Nixon was honest and had nothing to hide he would not have had to resign. When asked about the Watergate investigation, the student body was in favor of a fair and impartial investigation by independent federal judges, but many of the students did not believe that the investigation would be fair and impartial.

When asked the question, "Will the president ever resign?", most of the student body believed that Nixon would resign if he were found guilty of the Watergate conspiracy.

The opinion on the Middle East situation was much more staggering. Whereas the majority of the students leaned toward United States non-involvement a great many were in favor of partial United States intervention. One of the main reasons for the large staggered results is the many liberal students polled. All of the Jews polled felt that the United States should definitely be partially involved, if not totally involved in the Middle East conflict. The students at UMSL support the position taken by the Middle East Conflict Committee because the committee feels that American soldiers are being used as guinea pigs in a war involving American soldiers.

Maybe the way to change the world is to join a large corporation.

We don't make a lot of noise, but this is where it's really happening. You see, a large corporation like Kodak has the resources and the skill to make this world a little more decent place to live. And we intend to do what we can to see that this is exactly what happens.

Take our home city, Rochester, New York for example. We cut water pollution in the Genesee River by using natural bacteria to dispose of unnatural wastes. We cut air pollution by using electrostatic precipitators in a new combustible waste disposal facility. We helped set up a black enterprise program in downtown Rochester, and we've been experimenting with film as a way to train both teachers and students— including some students who wouldn't respond to anything else.

And we didn't stop with Rochester. Kodak is involved in 47 countries all over the world. Actively involved.

Why? Because it's good business. Helping to clean the Genesee River not only benefits society... but helps protect another possible source for the clean water we need to make our film. Our combustible waste disposal facility not only reduces pollution... but just about pays for itself in heat and power production and silver recovery. Our black enterprise program not only provides an opportunity for the economically disadvantaged... but helps stabilize communities in which Kodak can operate and grow. And distributing cameras and film to teachers and students not only helps motivate the children... but helps create a whole new market.

In short, it's simply good business. And we're in business to make a profit. But in furthering our business interests, we also further society's interests.

And that's good. After all, our business depends on society. So we care what happens to it.

Kodak
More than a business.
Panel debates relationship of race and academic success

by Dennis Zaretsky

Race and Intelligence

Over the past few decades, theories claiming that working class people, and blacks in particular, are genetically inferior in intelligence have been formulated. Critics of this view are Arthur Jensen of the University of California, Berkeley and Richard Herrnstein of Harvard.

Three basic objections have been raised to this view:

1. Critics have claimed that intelligence is not a well-defined, measurable biological trait, and even if it were, intelligence cannot be measured by IQ tests. Since the work of the "genetics" theorists rests upon the 15-point mean difference on the IQ tests between black and white (and similar differences between children of workers and children of professionals), the attack on IQ tests undermines their theories.

2. There are objections that the methods used in determining the heritability of intelligence have been unscientific. The statistics used by Jensen, in particular, are based on studies that have been carried out at Harvard.

However, his methods have been repeatedly questioned. As Leon Kamin, of Princeton University, recently pointed out: his test sample was too small; he falsely assumed that twins were being adopted into randomly different environments; he sometimes retested the same IQ scores when they didn't fit. Proponents of intelligence is 80 percent, this figure is only approximate within a given population. There is no statistical legitimacy for making cross-racial or cross-class inferences.

The Causes of Poverty

Besides those who believe that the conditions of the poor are due to their genetic inferiority, there are those who advocate the theory that unemployment and the general conditions of ghetto life are attributable to a "deprived culture" of low-income people. Two of the leaders in this theory are Daniel Moynihan, and Edward Banfield, both of whom were top domestic advisors to the presidential Nixon.

Moynihan claims, that due to their crumbling, maternal family structures, black children have a chance of success in school or life, in seeking employment. The main basis of disagreement to this theory is summarized by William Ryan, in his book "Blaming the Victim." Ryan argues that whatever deviations from the ideal family structure do occur in the black population, thesedeviations are a result of unemployment and discrimination, not a cause of it.

Edward Banfield's theories are embodied in his book "The Unheavenly City." In this book, Banfield claims that there is a "lower class" made up of all those who are not work-oriented, and that the character traits of this "lower class" are such that they actually enjoy living in slums and being unemployed.

Critics of Banfield have argued that there is no measurable "lower class" as he defines it, and there is little or no correlation between those who are poor and those who are present-oriented - a correlation which is implied throughout the book. Furthermore, it is argued that there is no cultural difference between the poor and the middle class. Rather, the reason people are poor is because they are poor, rather than because they are members of a lower class.

Race and Education

The final panel will discuss the theories of both "genetic inferiority" and "culture of poverty" as related to admissions policies. School segregation, IQ testing and tracking in pre-college and the admissions policy of UMSL will be discussed. Faculty and students and faculty an opportunity to hear debate on these issues as they apply to an American institution.

New York art at 'Gallery 210'

"New York Today: Works on Paper," an exhibit of drawings by contemporary New York artists, is open at UMSL, Nov. 11, in "Gallery 210." A reception will be held in the gallery the day from 3 to 4 p.m. "Gallery 210" is located in the UMSL campus. Regular hours are 10 a.m. to 2 p.m., Monday through Friday, 5:30 p.m. to 7:30 p.m. Tuesdays and Wednesdays. Exhibits and reception are always free and open to the public.

The "Works on Paper" show is a product of the U.K. Harris Gallery in New York's SoHo area. Owner Ivan Karp described the exhibit as "a revolution, covering every important modern art in New York today."

Fifteen artists will be represented in the show, which will be on exhibit through Dec. 7.

Some groups attempt to de-emphasize class factors by creating musical or literary events, as its quality. Last week, the Powell Hall Band proved themselves above all this practice by performing music

Concert Review

by Judy Singer

With a strength provided by the musicians and freedom of style. Originally from San Francisco, the group appeared for two performances at Kiel Auditorium on Oct. 29 and 30. The gentleness of the group's sound captivated the consciousness of approximately 9,000 fans each night. Listeners were given their money's worth in music as the Dead played for four and a half hours without interruptions by a back up group or special attraction.

Jerry Garcia displayed his keen sense of rhythm in guitar work on the bands more spirited tunes, such as "Tennessee Jed" and "Casey Jones." Several hard rock numbers were adapted to the softer, slower style that has become the Dead's trademark. These, of these, "The Race Is On," was sung by the Dead's Bobby Weir. The tune was originally recorded in the 1960's by Jack Jones. Some more recent ballads from the groups new album were promoted at the concert. Entitled "Plum's Fandango," the album is the first to be produced on the bands own label, Grateful Dead Records. An enthusiastic response was given to this new release, a hauntingly beautiful melody which does justice to Garcia's melancholy treatment of the song. Tunes of this type demonstrated the polish, yet free-towering instrumental performance that has evolved over eight years period the group has been in existence.

The concert opened with "Breach's Variations on a Theme of Haydn and "Suwan Lake" by Tchaikovsky, Dupont's "Febre," and an additional from the orchestras repertoire, completes the program. Miss Hassman, who will be making her Powell Symphony Hall debut at this concert, performed with the orchestra free-towering instrumental performance that has evolved over five years period the group has been in existence.

Teenager solos at Symphony

Romantic program will be featured at the Saint Louis Symphony Orchestra's Monday Festival of Music in concerts on Sunday, Nov. 11, at 3 p.m. in Powell Symphony Hall. Associate Conductor Leonard Statkin has invited 18-year-old violinist Inez Hassman, to perform with the Orchestra in a performance of Saint Saens' Violin Concerto No. 3.

The concert opens with Brahms' Variations on a Theme of Haydn and "Suwan Lake" by Tchaikovsky, Dupont's "Febre," and a new composition, "Waltz for Strings," by Leonard Statkin. A native of Io. Sco., Mr. Statkin studied with Inez Hassman, and will be making her Powell Symphony Hall debut at this concert, performed with the orchestra free-towering instrumental performance that has evolved over five years period the group has been in existence.

The concert opens with Brahms' Variations on a Theme of Haydn and "Suwan Lake," by Tchaikovsky, Dupont's "Febre," and an additional from the orchestras repertoire completes the program. Miss Hassman, who will be making her Powell Symphony Hall debut at this concert, performed with the orchestra free-towering instrumental performance that has evolved over five years period the group has been in existence.

Stine shines as 'The Miser'

The entire cast of Molière's "The Miser" acted together last weekend to set the mood of the play, while setting up the stage sets right before the audience's eyes during the prologue. But after that, the play revolved around the vitality and spirit of Harpagon, the miser. Bill Stine was excellent as the wretched, distorted old man. He intimidated his servants with enthusiasm, and, at the same time, loved his money. Although Harpagon denied his children the devotion which he bestowed upon his hidden wealth, Stine came close to capturing the audience's sympathies when someone stole his money.

Molière's plots usually tend to twist, catching the characters in a humourously complicated plot. This one was no exception. The son and daughter of Harpagon have secret affairs, while his servants act as accomplices in the plots. The ending of the play is almost like "A Funny Thing Happened on the Way to the Forum," with everyone turning out to be lost siblings and children. These other characters were fairly well portrayed, yet none with the degree of affection and strength which spotlighted Harpagon.

In order to recreate the mood of this seventeenth century comedy, some of the characters wore masks reminiscent of the Commedia dell'arte theatre. The drooping eyes and greatly protruding noses added to the homely, yet comical characters. Harpagon was a funny play. There came off as a funny play. There was some stumbling over lines but none with the degree of improvement, "The Miser" came off as a funny play. There was some stumbling over lines and dragging dialogue in places. But, Harpagon lived again as the stingy, self-centered man that he was created to be.

Keystone electronic pocket calculators

adds, subtracts, multiplies, divides… and figures percentages, too!

MODEL 350
The miniature miracle! The Keystone Calculator is small enough to carry in your pocket, yet it does almost any calculation quickly, easily, reliably. It has the biggest, brightest, easiest to read answers of any unit this size and a "unique percentage key". The Keystone Calculator has a constant memory "lock". It performs automatic discount and tax calculations and offers a floating or fixed decimal. Features extra large keys for added accuracy. Operates on 4 AA batteries. Complete with AC adapter and carrying case.

94.95

MODEL 390
Same as model 370 with built in accumulating memory. Dual register allows separate calculations while figures are held in memory. Complete with AC adapter/recharge and combination work stand/carrying case

119.95

RIVERMEN PREPARE FOR BASKETBALL OPENER

Fourteen varsity players, including five returners, are looking forward to the opening day of basketball practice. Head coach Chuck Smith will have to prepare the Rivermen for the season opener against defending NCAA Division III champion Illinois College on November 30 at UMSL.

Smith, whose first victory this season will be the 200th win in his 14 years of college coaching, will be working with a highly motivated group of players. The team has a solid foundation, with senior forwards Kevin Brennan, both from Wheeling, Illinois, who was named the team's top defensive player in 1972-'73, and guard Jim Schmidt, a three-year starter throughout last season, returning.

Dale Wills, a 6-3 Christian Brothers High School standout from Northwest High School, is expected to see action for the opening day of basketball practice. Head coach Chuck Smith said, "We have a good nucleus of returning players, plus some of the best young players we have ever recruited. We should be a much better team than a year ago, and I'm anxious to see how quickly we develop," Smith said.

Heading the list of returning players is guard Kevin Barthule and forward Mike Lewis, both from Collinville High School. Returning to play in 19 games as a senior, guard Mike Lewis said, "We're going to be a lot easier to run all the time this season," he added. "We have a good nucleus of returning players, plus some of the best young players we have ever recruited. We should be a much better team than a year ago, and I'm anxious to see how quickly we develop," Smith said.

Cross country ends regular season

by Jim Shanahan

The regular season ended on a sour note for the UMSL Harriers as their record dropped to 6-7-1. The Harriers split a double-meet with Principia, Tuesday, and were defeated by Greenville on Wednesday, with a time of 35:50. Meanwhile, the University of Illinois-Chicago Circle won the meet with a time of 36:30.

Ed Heidbriek led the meet on the last four miles of the course at Principia, Tuesday, with a time of 20:30. In spite of strong races by sophomore Chuck Hallett and freshmen Paul Wood, John Fitzpatrick, and John Edwards, Greenville swept the Rivermen to claim a victory against the young team. UMSL was just as convincing in its victory over Principia, as only one runner from the home team finished in the Rivermen's top five.

UMSL returned to the site of a quartet of invitees for the UMSL Invitational in December. The quick-moving takedown artist produced a fantastic junior college career. In two seasons of wrestling for Jack Crier at Forest Park, Holmes did not lose a dual meet, compiling a 30-0 record with two consecutive 15-0 years. He won back-to-back Region 16 titles at 118-pounds.

UMSL acquires wrestling stand out

Greg Holmes, former Ritter College High School and Forest Park Community College wrestling coach, will be joining the UMSL wrestling staff. Holmes, who wrestles at 118- or 126-pounds for the Rivermen, won three district titles at Ritter where, he lettered three times. He enjoyed a pair of 25-7 records his senior and junior years, and compiled an 8-2 mark his sophomore season. Holmes was the high school regional runner-up twice.

Fifth rated soccer Rivermen pull 1-1 tie with Rockhurst

UMSL soccer coach Don Dallas knew his team would be in for a rough night. The opponent, Rockhurst College, had always given the Rivermen trouble, plus Dallas would be without three of his best front line men.

And rough it was for the fifth-rated Rivermen when Rockhurst tied UMSL, 1-1, in Kansas City last Saturday night. "I'm not real upset with the tie, I'm just glad we got out of there without losing," Dallas said.

Like Quincy College had done to the Rivermen the previous week, the Rockhurst players forced UMSL away from the Dallas style of play. "We like to use the whole field with an emphasis on sharp passing and spreading the opponent's defense," Dallas explained. "But Rockhurst out-hustled us to the ball, played aggressive and didn't give us the chance to spread their defense until late in the game."

Dallas called the Rockhurst style the most physical he's seen in a long time, but typical for a Tony Tocco (the Hawk coach) team. "Tony likes his players to try to intimidate the opposition and they were successful, although I thought the officials should have controlled the game more than they did. Someone could have gotten hurt the way the refs let everybody bump," Dallas said.

Once again it was an outstanding display of goalkeeping by UMSL's Frank Tusinski which left the Rivermen a chance to be the university's first undefeated team. After Rockhurst's Rich Suit, a graduate of Prep North, gave the Hawks a 1-0 lead at the 28:50 mark of the first half, Tusinski had to withstand a series of rushes from an inspired Hawk contingent. Three times in the next four minutes Tusinski, an All-American in 1972, made stops which Dallas called "spectacular."

With some good midfield play from Kevin Missey, who Tocco had shadowed by two Rockhurst defenders most of the game, and a couple of excellent performances by a pair of Rivermen second-stringers, UMSL was able to dominate second half play. Junior centerback Joe Krefl replaced a tired Al Rutroff and settled a shaken UMSL defense, while substitute striker Mark Dorsey added life to the offense. Dorsey, who was cut by Dallas as a freshman, took a pass from Tim Smith at the 15-minute mark of the stanza and sent a rocket pass the Hawk goalie to tie the game. Dorsey, who did not start the contest, received his chance because Tim Kersting, Frank Flesch and Dennis Maddock, a trio of the best UMSL forwards, did not play.

Kersting is nursing a severely bruised right calf and Flesch is having a problem with a hamstring pull in his right thigh. Maddock is suffering from pleurisy, an inflammation in the lungs. Dallas is not sure whether any of the three will play next week. "We're pretty sure we'll receive an NCAA tournament invitation and we're trying to keep everybody healthy for those games," he said.

The Rivermen, who now own a 6-3-2 record, will host Washington University in the regular-season finale next Saturday (November 10) at UMSL. Game time is 1:30 pm.

Volleyball changed

The dates for the Intramural Coed Volleyball program have been changed. It will run from Nov. 18 through Dec. 9, with the games being played on Sundays, starting at 6:30 pm. Complete team rosters or individuals may sign up in room 225 of the Multi-Purpose building, or call Judy Whitney at 453-5641. The sign up deadline is Wed., Nov. 14.
A few years ago if you happened to bring up the name Cleo Laine, a
smattering of the cognoscenti might have smiled smugly...Then came
the big revival of "Show Boat" at London's Adelphi...and last
spring a segment of her "Miss" was nationally telecast on the Tony
awards. When she arrived for her first Carnegie Hall concert in
April...The place was packed, the air buzzing...They stood cheering
in the aisles. She very well might be the greatest pop singer now
before the public. --After Dark, September, 1973

First, remember the vocal warmth and technical brilliance of Ella
Fitzgerald in her prime. Then think of the dramatic impact of
Lotte Lenya...imagine a woman who can reach those diverse effects
and many that lie in between them; imagine her singing uncomonly
literary lyrics to splendidly effective music and you have a pale
idea of Cleo Laine. --Joseph McLellan, Washington Post

A phenomenon of the age, a great artist, a wonderful singer, and how many "pop" (in the broad sense of the
word, as opposed to "classical") singers can you think of who have a trained voice
that can truly be considered a polished instrument? Actually, on the female side,
not including Ella Fitzgerald, who's so far ahead. The answer is: Cleo Laine.
--Los Angeles Free Press, April 6, 1973

Cleo Laine

By now you must get the idea. Cleo Laine is perhaps the leading talent of the coming
years. She's magnificent. She'll return to the states this fall for an extended
stay and you can bet nobody ever again will
have to ask: "Cleo Who?"
--The Newark Star-Ledger
