Satisfied with settlement: Jane Miller, assistant professor of chemistry, discusses result of sex bias complaint. [Photo by Larry LaBelle]

Miller, administration reach settlement on sex bias

Lynn O'Shaughnessy

Under the supervision of the Equal Employment Opportunity Commission, Jane Miller, Millett's ground-floor professor of chemistry, reached a settlement in July 1974 with the administration of UMSL. Miller had filed two complaints charging discrimination based on sex. The first was filed with the Missouri Commission of Human Rights in November 1971. The commission ruled in Miller's favor. UMSL was ordered to correct its policies and provide Miller with the same opportunity to further her education. Miller's next step was filing a complaint with the EEOC in October 1972. The EEOC had the power to reside over the negotiations between Miller and the administration, but the commission could not come to a final resolution.

The predetermination settlement reached by the two parties, however, had to be approved by the commission before it could be finalized. If an agreement had not been reached between Miller and the administration, EEOC could have brought the issue to federal court.

Pay discrimination because of sex was Miller's major grievance. Miller said that she was the only paid assistant professor in chemistry despite her tenure. In all other departments, she said, the project. Her celebrated assistant professors are the highest paid of the university professors.

Another area of dissatisfaction was the heavy teaching load. "I was not given the same teaching load as the other assistant professors in chemistry," Miller said.

Besides a large course load, which included some evening classes, Miller was placed in charge of the chemistry lab, which she said is very time consuming.

"Also, because of her joint appointment with education, she had an obligation to teach chemistry methods in education courses. She was required to supervise and observe student teachers in schools around St. Louis. All these obligations, Miller said, prevented her from giving a proper amount of time to research.

The final settlement promised a better teaching load, comparable to other assistant professors, and provided Miller with a full-time assistant who could come to the campus.

Miller also received a cash settlement amounting to $10,850. The five figure sum was computed on the basis of past salary inequities. After this threefold settlement was offered by the university, Miller dropped all complaints. She remarked, "I am very satisfied with the agreement." To Miller's knowledge, she was the first person to bring action against the university because of sex discrimination.

It appears that Miller's case set a precedence for future sex discrimination cases against the university. Since Miller's own filing, 19 more sex discrimination cases against UMSL have been received. Some of these pending cases, says Miller, were initiated by women job seekers, who felt they were not hired because of sexual bias. These cases are now being reviewed by EEOC and HEW.

"It takes a tremendous amount of courage to file a suit," Miller said. Inevitably, she continued, there was criticism and resentment directed against her. Some people thought I wasn't worth it.

Miller is especially concerned with the misunderstanding generated out of her case. She wanted to emphasize that the case was never brought to court, as some believed, but was settled inside the confines of the university.

Besides the controversy a sex discrimination complaint stirred up, there are other hazards created against an individual challenging the university in any type of case. Sometimes, Miller said, formal complaints can put the faculty or staff person's job in jeopardy. While tenured professors are protected against dismissal, non-tenured personnel can be replaced.

Another consequence of filing a complaint, Miller says, is the possible difficulty in seeking another job.

Miller feels a positive consequence of her complaint is more awareness of women's problems on campus. She also added, "The administration is making a very good effort to bring women's salaries to a medium level."

Bids exceed budget for Administration Building; space cut

Hank Vogt

"There's trouble in the river city."

When one contractor feeling after five bids, opened last Thursday for the construction of the new administration building, were about $300,000 higher than the $2 million appropriated by the state legislature.

Plans for the new building will be redesigned and scaled down according to university Business Officer John Perry. This will aggravate an already tight squeeze for space in the new building.

A low bid of $2,787,276 was submitted by the C. Rallo Construction Company. "We just have to cut down on the space in it," said Perry, referring to the plans for the new building. Perry is part of an informal committee which will make a recommendation to redesign and rebid the project to the university Board of Curators meeting in Columbia Nov. 21-22.

Other members include the director of the physical plant, director of buildings and architects of the project.

The university had hoped that a total of 14 alternatives including elimination of brick facing on retaining walls, smaller light fixtures and vinyl tile in place of carpeting would offset the higher bids. With all the alternative deductions the low bid came to $2,177,976.

The three student-oriented groups which did not have space assigned to them by the administration, the groups are now housed in the present administration building which was labeled a fire trap and safety hazard by the state Commission on Higher Education in 1972. The three groups have been given verbal promises of space in the new building.

Perry said the university will probably not ask for more money to build the new structure. "We're obligated to work with what we have," he said.

Higher construction cost and the need for more space in the building were two reasons given by Perry for moving as quickly as possible on the project. He added that a request for an additional appropriation would be a lengthy process.

The present administration building was built about 1910 and served as the clubhouse of the old Belleville Country Club.

Campus officials hope that construction can start within three months. The Board of Curators give approval. Completion would be 16 months after building began.

Bids for the new $2.2 million general services building will be opened Dec. 10 with many of the same firms bidding on the project.

Former CIA agent to highlight political week

Morton Halperin, former Assistant Secretary of Defense and member of the National Security Council, whose telephone was reportedly "bugged" will be featured as a speaker from 11:30 to 1:00 in room 331 SSBE on Wednesday, November 20.

Halperin's address on the U.S. covert activities will be one of seven speakers programs being sponsored the week of Thursday, November 21 through Friday, November 22. All of the guest speakers are appearing through the joint efforts of the Center for International Studies, the College of Arts and Sciences, the Political Science Department and the UMSL Programming Board.

Scheduled for Monday are NATO representatives from West Germany, Norway and Turkey in 331 SSBE from 9:00 to 11:00 and New York Times correspondent Leslie Gelb on the SALT talks from 11:30 to 1:00 in the Penney Auditorium. Another group will meet in room 331 SSBE on Tuesday from 3:00 to 5:00.

Tuesday will feature Mark Seldon, an assistant professor of Chinese History at Washington University and Joel Glassman, assistant professor of political science at UMSL. Both shall discuss U. S. involvement in Asia at the Penney Auditorium from 11:30 to 1:00.

Also speaking Tuesday will be Victor Marchetti, a former Central Intelligence Agency member and the author of the CIA and the Cult of Intelligence. His address on CIA activity will be given from 2 to 4:30 in the Penney Auditorium.

In addition to the appearance of Morton Halperin, a seminar is scheduled for Wednesday from 3:00 to 5:00 in 331 SSBE.

Jeffrey Record, a researcher at the Brookings Institute, Edwin Fedder, the Director of the Center for International Studies, and Dr. Torleiv Moen, professor from the German Embassy will appear Thursday for a discussion of U.S. troops in Europe. A seminar will occur later in the same time and place as Wednesday.

On Friday there will appear David Fells, professor of Economics at Washington University, Simon Kagan, professor of international business at UMSL and Shea Smith a vice-president of Monsanto. They will speak on multinational corporations in 331 SSBE from 11:30 to 1:00.
Mark Henderson

The commencement address for the UMSL January comprehen- sion will be delivered by out-going St. Louis County Supervisor Roy Roos, it was learned at the Senate meeting last Thursday.

Joining Interim Chancel- lor Emergy Turner, Roos was delighted when asked to make the address, and even postponed a planned vacation until after the exercises. An Ad-Hoc Committee on Honorary Degrees, chaired by Al Jackson, has placed the name of Lawrence Roos in nomination to receive UMSL's honorary L.L.D. degree at the January com- mencement.

The committee, according to Jackson, felt Roos deserved the title, "for the services and his aid in growth in helping the St. Louis metropolitan area. Also, unlike other politicians, he has remained neutral to all three of the universities, and his gracious acceptance of our invitation will help UMMSL's image in the community."

The Senate overwhelmingly approved the committee's nomination, and it will now go to the Board of Curators for final approval. Joseph McKenna of the University, anecdotes that the by-laws, in this case, called for a vote of the governing faculty body.

Chairman Ignatius Norris ruled McKenna out of order, declaring the Senate as the governing body of the University.

Student senators pleased

This ruling pleased several of the student senators, two of whom are Mike Dave and Sue Rice. Their fear was that, in time, the newly established faculty council would take over much of the Senate's control over decisions concerning the faculty and leave the students with no say in the matter.

Turner announced that the newly elected legislators will be at UMSL on December 2 for a luncheon, and Turner "plans to present the legislators with UMML's financial problems."

Turner announced the opening of bids for the new Administra- tion Building with the lowest bid being over $400,000 more than the base sum of $1,850,000 allowed by the Board of Curators.

Building to be redesigned

Turner said "the building probably will have to be redesigned to fit the budget allowed."

The planned General Purpose- Purposes Building has been slowed be- cause the land on which the building will be constructed has not yet been completely cleared of gram ownership by private, citizens. Bids will open for the building in December.

Turner also announced the completion of the optometry report for a school of optometry on the UMSL campus, prepared by Everett Walters, dean of faculties. Turner would like to see such a school if it was financed separately, and only on special legislative funds.

Turner mentioned a letter written by C. Brice Ratchford concerning a new policy on the confidentiality of records of stu- dents. The Committee on Ad- missions gave a report on the letters, agreeing with all points except the opening up of counselor's psychological files and the files made by the UMSL doctor to the student.

Teams to enter play-offs

Robert Markland, chairman of the Athletic Committee, gave his committee's report. It has been approved to send the men's soccer team to the regional play-offs if asked, the women's field hockey team to the state play-offs, and the women's volleyball team to the district and state finals.

Walters gave a report from the Committee on Commit- ments, Tenure and Promotion. The committee has been looking into ways of changing the system of hearings. Now, ac- cording to Walters, "it is no longer necessary to identify those people casting dissenting votes. Only a summary for the reasons of such votes is neces- sary."

Waxed of Mo-PTRG funding

The final report was that of the Intercampus Faculty Ad- visory Council. A spokesman for the committee told the Senate that Ratchford has written the council saying, "Mo-PTRG is active on all campuses and he warns the faculty to watch the way it is financed."

The next Senate meeting will be at 3:15, December 5, in 124 J. C. Penney.

New courses for Winter

Specialized education

The School of Education has scheduled two special course offerings for next semester (Winter '75). The first course will be a special day section of Education 152, Teaching Social Studies in the Elementary School. This course, which will be identified in the Schedule of Courses as Ed. 152a, is es- pecially designed for Early Child- hood and Special Education majors.

The second special offering is a Science Education-Mathemat- ics Education-Field Experience block consisting of Education 153, "The Sciences and Education," Education 153a (Teaching Math), and Education 372a (Field Study in Elementary Education). Students desiring further in- formation regarding these courses may contact the Office of Advisement and Certifica- tion, Room 461 SSBE Building.

Chemistry - world impact

Selected topics in chemistry and their impact on the world society will be the subject for a new course developed by the Chemistry Dept. for non-science majors.

The object of the course is to demonstrate that Chemistry plays an integral part in the modern world and to point out that its impact is felt beyond the laboratory in a variety of fields including medicine, agriculture, population control, genetics, envi- ronmental problems and solu- tions, and public policy.

Chemistry 10 is being offered at 8:40 MWF during the Winter 1975 semester.

Interdisciplinary - energy

A new interdisciplinary course on energy is being offered during the winter semester at 9:30 on Tuesdays and Thursdays for three units of credit.

The goal of the course is to give students the opportunity to do in-depth, faculty-assigned re- search investigations into vari- ous aspects of energy produc- tion, conversion, environmental impact, and policy deter- mination.

For further information about this course, please contact Bernhard Feldman of the physics department or phone 453-5931.

Opinion poll

on ERA

This poll is designed to de- termine general feelings on campus toward the Equal Rights Amendment.

Please check one response for each question.

1. Do you support the Equal Rights Amendment?
   Yes
   No
   No Opinion

2. Do you believe women presently have equal rights un- der the law?
   Yes
   No
   No Opinion

3. Are men more or less capable than men of holding public office?
   More capable
   Less capable
   No opinion

4. Are women capable of holding such positions as police officers, airline pilots, top business executives, etc.?
   Yes
   No
   No opinion

5. On the average, are women or men more educated?
   Women
   Men
   No opinion

6. Are men more intelligent?
   Men
   Women
   No opinion

7. Are men more intelligent?
   Men
   Women
   No opinion

8. Are men more intelligent?
   Men
   Women
   No opinion

9. Are men more intelligent?
   Men
   Women
   No opinion

10. Are men more intelligent?
    Men
    Women
    No opinion

Please place this survey sheet in the Current mailbox in the University Center of Forest Park.

This poll is a student's political science project and does not reflect the views or concerns of the political science department of the University of Missouri-St. Louis.

Ask for the UMSL special
Hearing on new social work degree program

A new undergraduate Bachelor of Social Work degree program is currently being considered by the Curriculum Committee of the College of Arts and Sciences.

The Curriculum Committee is holding an open hearing on this program for all interested students, faculty, and staff on Monday, November 18 at 2:40 pm.

The hearing, in Room 126, is being held to provide information to the campus and to answer any questions which might be raised concerning this program.

Advising proposal clears first reading

Lyman Sargent, professor of political science and chairman of the committee, said that he hoped that this semester’s Committee on Committees of the Council will have a list of members to nominate for the new standing committee, the Advising Coordinators Group, by the next meeting of the council. That way, the committee will be able to begin the task of carrying out the directives of the Ad-Hoc Committee on Advising this upcoming semester.

The Advising Coordinators Group will consist of the assistant dean as an ex-officio voting member, two faculty members each will be from the humanities, the sciences and the social sciences, along with two students. The group is to meet once a semester, prior to preregistration, to exchange information and to inform themselves and advisors of all changes in the system. The group is also charged with the duty of overseeing the advising system, studying reports made by the deans and the dean’s office. They are to study advising systems at other universities and make appropriate recommendations to the College.

A vote to accept the report after its second reading will mean that the new committee will take the directives of the proposal submitted by the Ad-Hoc committee and act on them, assuming that they can be done.

Within each department, it is required to establish an advising system. All majors within each department are required to be informed of that system via mail. Each student is to be mailed a list of requirements, options and changes. In addition, trained peer advising is to be provided through the department as well as faculty and student ombudsmen who are required to regularly report complaints to the College of Arts and Sciences.

Considered among Ad-Hoc Committee members as the most difficult proposal to be acted upon will be the request that teaching loads be reduced for advising coordinators.

Hewlett-Packard pocket calculator is a gift for a lifetime.

The HP-35 Electronic Slide Rule.
Performs all basic arithmetic, trig and log calculations automatically. Has an Addressable Memory, displays 10 digits in fixed decimal or scientific notation. Automatically positions decimal point throughout its 200-decade range. Cost, $255.

The HP-65 Fully Programmable.
The world’s only fully programmable pocket calculator. You can write, edit and record programs up to 100 steps long. You can take advantage of HP pre-recorded programs; so you gain the speed/accuracy benefits of programming without writing your own. Performs 51 pre-programmed functions. Cost, $795.

The HP-45 Advanced Scientific.
Performs 44 scientific functions including vector arithmetic, rectangular to polar conversion, mean and standard deviation. Has a 9 Addressable Memories. At $325, it’s the pre-programmed calculator for all scientists, engineers and students of science and engineering.

The HP-80 Financial.
Performs virtually all time/money calculations in seconds. Has a 200-year calendar; an Addressable Memory. Lets you make new kinds of management calculations that enable you to make better decisions. Cost, $395.

The HP-70 Business.
Performs all sorts of general business, interest, financial management, lending, borrowing and saving calculations—precisely, quickly, easily. A Financial Memory Bank lets you enter numbers in any order and change them anytime. Has 2 Addressable Memories and a very affordable price, $275.

*All HP pocket calculators have Hewlett-Packard’s patented RPN logic.

A Hewlett-Packard pocket calculator is a gift for a lifetime.
Dear Editor:

Last Friday, Nov. 1, I was overwhelmed with intense hunger and had nowhere to turn but our beloved snack bar. I had not frequented this establishment for quite some time, so I had hopes that the quality of the food would have improved. Needless to say, I was disappointed. I discovered I chose a stale cheeseburger and cold French fries. It was hangry and ate it all. Minutes later I was feeling the effects of my poor dietary decision at the beginning of my 2:40 Chl Psychology class. Bleary-eyed and weak-kneed, I journeyed to the John Glenn in Ohio to discover the greatest relief of my life.

I can’t speak for others that may have been through what I have, but I will say that November will be a bountiful month in our snack bar. I have had two and a half years of experience in managing the fast-food industry, so I know the people in the snack bar can do better. I regret to say I will not be returning to the snack bar in the future to see if any improvements occur for the health of us all.

Don Gawlik

[Editor's note: A copy of the above letter came to Bill Ed- wards, University Center Director, who promised to forward this letter before this issue's deadline.]

Bill Edwards

Chairperson of the Committee on Political Science

Letters reporting illness after snack bar lunch...

Dear Editor:

In a recent unsigned letter to a student complaining about the poor ethics of the current advising system, the writer stated that the current advising system was unqualified and poorly run. This is a misrepresentation of the current advising system and its advisors.

Firstly, the advising system is well run and staffed by knowledgeable advisors. The advisors have a wealth of experience in their fields and are dedicated to helping students achieve their academic goals.

Secondly, the provisions that the writer states the new advising system will bring are not final. They are suggestions to solve our advising deficiencies. This lack of student involvement in advising is the reason why so many students have not been satisfied with the current system.

Finally, the article is not a complete picture of the advising system. It is incomplete and only reflects the writer's biased opinion.

Judy Townsend
Prospects uncertain for grads in search of teaching positions

William Wolf

While economists ponder the effects of rapid inflation and rising unemployment on the national economy, UMSL graduates and education majors are concerned with the perennial problem of too many teachers chasing too few jobs. And on top of this lower demand, forecasters predict that relief won't be immediate, between enrollment is expected to climb once again.

"No one is optimistic," stated Rosemary Britto, who counsels education majors for the Office of Career Planning and Placement. "But there are still fields within education that offer good opportunities.

Why does the demand for elementary and secondary level teachers plummeted in the last five years? An August 1973 report by the Indiana State University School of Education suggests that the point is three-fold.

1.) The baby boom which earmarked a sharp rise in elementary and secondary during the 1950's and early 60's is over. A survey recently published in the St. Louis Post-Dispatch showed a marked of school districts in the area with a declining enrollment.

2.) Enrollment nation-wide in the schools of education has doubled in the last decade, reaching a peak of 1973. The supply of new teachers has outstriped demand by an ever-widening margin since 1969.

3.) Tax increases in many of the large cities of America which would have allowed for the hiring of more or the

Michele McGrath

Students must be willing to re-locate.

[Photos by Larry LaBrier]

On the darker side of the job picture lies secondary and elementary teacher certificate holders. Elementary program registrants numbered 319, out of which less than half, or precisely 44 per cent, found positions. Secondary teachers whose averaged percent placed figures to be close to that of elementary teachers, displayed a wide variation between its highest and lowest placed fields. For example, 20 out of 27 Math teachers found positions while only 14 percent of the 97 registrants in social studies found teaching jobs.

Michele McGrath.

Student reaction to declining job opportunities has been two-fold, according to McGrath, who is also a teacher in the School of Education. "More and more students are going into special education," McGrath said. "I would guess that at least 50 percent of the students are now in special education or early childhood development fields.

Another reaction to dimming prospects of employment shows up in the enrollment figures. Including postgraduate students, enrollment in the school dropped from 753 last year to 638 in 1973.

For those enrolled in the School of Education, the drop-out rate is low and their mood appears to be generally optimistic about finding employment.

"I believe that they will be the ones who find jobs in their fields," stated Bruno. "Health-teaching is good but one must be realistic also.

While teachers in the elementary and secondary levels of education are hard-pressed for openings, there are a number of ways students can improve their prospects. Students must be more flexible, according to Bruno.

"Many of the openings are in the outlying areas of St. Louis and students must be willing to relocate.

But most students appear reluctant to travel beyond the immediate districts to where the jobs are, stated McGrath. "Most of them expect to find jobs in districts like Parkway or Ladue," she said.

"And married women who take up teaching to supplement their husband's earnings don't want to move farther out.

Another way to improve the chances of employment is through receiving dual certification. The wider number of students you can teach, the better the chance that the school district can use them. According to education advisor McGrath, school districts will "stretch you every which way they can.

But there is only so much a student or a placement office can do to help him or her find a job. The truth remains that a majority of the upcoming graduates will be unable to find jobs in the field of education.

Joseph Palmer, Director of the Placement Office, warned that if the trend continues, placement in the field of education might drop to as low as 25 percent within the next few years.

Many educators have become concerned as to what role the Schools of Education should play in the face of these ominous trends. Will the schools become factories turning out ever-increasing numbers of unemployable or will they suffer devastating cutbacks in programs and staff due to declining enrollment?

A study done by the Indiana State University School of Education suggests two solutions to the problems that schools face.

The first answer hinges on better programs that would improve the quality of teachers coming on to the job market. The report stresses that more and better field or clinical experience programs would greatly enhance the job possibilities for graduates of these programs.

On this first point there seems to be no argument that UMSL could do a better job with its program. TheBecker CPA Review course, for example, is not

"We feel we have a good program," said William Franzen, UMSL's Dean of Education. "But we are always looking at the patterns of education and reorganizing to do a better job."

Advisor Michele McGrath believes that more time should be spent in actual classroom experience, especially in the field of special education. Her concern stems around the fact that some students aren't adequately prepared for handling the special children.

The second point, by far the more controversial proposal of the Indiana State report is a proposal to raise the standards required to enter the School of Education. This would be done primarily by raising the grade point average the student must have to gain admittance. The study states that there is a high correlation between the highest grade point scores and the ability to become a good teacher.

While better programs are generally agreed upon, the latter issue of raising the GPA meets with vibrant opposition by some. As Dean of the School of Education, Franzen is a staunch defender of UMSL's 2.0 GPA requirement to enter the school and the 2.2 required to gain certification.

"I believe it is better to let the student go through," said Franzen. "Confidence is an asset that many students will never be able to find in a classroom."

But whatever the trend may be, teachers will always be needed. It is up to the community to decide what exact skill and what degree teachers will serve to educate our generation's children.

"I don't think you have a math or a Social Studies major," said McGrath. "They need you in the classroom."

Capt. Walker "I最近 heard that the number of applications for teaching assistantships has increased by 20 percent this year."

"That's right," Franzen added. "We have had a lot of applications for teaching assistantships, and we are only able to fill about 20 percent of them."

"I think it's due to the increased demand for teachers," McGrath said. "The number of teaching assistantships is increasing, and the demand for teachers is also increasing."

The Current staff is presently preparing a magazine supplement to appear in the Dec. 6 issue. "Tentatively

Cacophony

will consist of 16 pages:

- short stories
- cartoons
- poetry
- satire
- drawings & sketches
- humor
- photo essays
- thoughtful reflections
- drivel
- giggles, big boffs, and campus comedy

But we want your help. If you have original material you wish to contribute, a quick and agile mind or other talents you would like to share, be sure to contact Mike Lowe or Jack Silas for more information."
Older students at UMSL for unique reasons

Howard Friedman

Next year, at the age of 80, Victor Quallen will retire from Western Electric. He will also graduate from UMSL with honors and a B.A. in English.

Tobi Silver, 37, entered Washington U. right out of high school and received a B.A. in French. Sixteen years later she is back at school at UMSL, beginning work towards a Masters of Business Administration.

"Some people might call me a radical," says junior Anne Irvin, 52. "Maybe I am."

What she and the others are, though, are part of a growing number of older students enrolled in college.

The older student at UMSL is here for unique reasons and faces some rather unique problems — from being mistaken for a professor to job and family responsibilities.

UMSL Business Officer John Perry returned to college to get his Masters in 1958. He was 38 years old and for one whole year he left his family in Columbia to study and live at Northwestern A. Flo Valley Geologist was a French. Sixteen years later she that theory. When he started at

Masters of Business Administration opening of this semester one part of the older students. Anne Irvin says this is true of older women in particular. But for herself she says "1 sort of resist this, it's not getting into the stream of what's happening."

Perhaps a part of the separation goes back to what Dr. Fagin describes as the fact that, their social needs are taken care of outside the campus community to a much greater extent than those of the younger student. And, Dr. Fagin continues, "There just is not much time for participation."

But time still doesn't stop them from participating. Vic Quallen wrote for the Flo Valley newspaper. Last summer he used his entire five weeks of vacation time to travel and study in Mexico with Luis Clay's UMSL sponsored group.

The avid rockhound has also been active on Geology field trips to the Smokey Mountains and elsewhere. "I don't think I'll ever really stop going to school," he said. "I'll just take what I want only more leisurely."

Perhaps UMSL or any urban commuter campus for that matter, offers too much of a homo genized setting for its student body. The older student, though, student as an exception to this being more apt to have been born or to have lived elsewhere than in St. Louis, to bring different perspectives to the classroom than those of the high school cliques that often depend on this campus.

But it's a two way street. They bring some heterogeneity to school and they take home new impressions and ideas. If the older students think he's gained a "truer perspective of young people" finding them "more outspoken, less hypothetical" than his generation in general. In the end, though, they are students like everyone else.

The SA-540X. A 2-channel/4-channel receiver with a matrix decoder. Inputs for a CD-4 demodulator. And a switch for 4-amplifier power in stereo. Then there's the SA-800X. With a built-in CD-4 demodulator. It can handle any 4-channel system with ease. Or the SA-7300X. It does everything the SA-800X does, but adds the convenience of automatic CD-4 separation and carrier level controls.

So go see your Technics dealer. Because he shows you why a Technics receiver should be the heart of your component system. And you can show your father you know the value of his dollar.
Students survive weekend in the wild

Karen Virgil

Can a group of UMSL students spend a weekend in the wild with no packed foods but only a Euell Gibbons-like affection for hickory nuts and survive? Obviously yes, if the students are those of geology professor Larry Lee, all of whom returned from their excursions to Weldon Springs on Oct. 10 and 18 seemingly stuffed.

Lee and his lab assistant, Patti Redenbaugh, took students from Metropolitan Geology 101 to live off the land as a wild foods project. The students were only to eat the foods they picked in the area for the entire weekend.

"Once people got there, they got a lot of food," said Lee. "It was really fun. A good trip. Everyone got along real well," said Patti Redenbaugh. "Just about all we did was eat but it was fun." The group brought oil, salt, pepper and sugar with them, but every other food had to be picked around the immediate area.

"It takes a while to gather food," Redenbaugh said. "And we fished. That qualifies as wild food if you catch it."

The group had boiled lamb's quarters (pig weed), day lily bulbs, sassafras tea, chickweed salad and persimmon pudding. Redenbaugh made acorn bread before the group left for Weldon Springs by grinding acorns into flour.

"It is good," said Redenbaugh. "Chickweed tastes like lettuce, acorn bread tastes like real strong whole wheat, day lily bulbs taste like radishes and persimmon pudding tastes like pumpkin pie.

"The things growing outside are cleaner than the things you eat in a restaurant," Redenbaugh added. "The average American dollar is cleaner than the knives and forks in restaurants. That is a fact."

The wild food also has more vitamins and keep people healthier than every day food. Rose Hip Flips are little berries that grow on wild rose bushes and are very high in Vitamin C. "Violet leaves are really high in vitamin C," Redenbaugh said.

"A glass of rose hip tea has more vitamin C than a glass of orange juice."

The students enjoyed the survival trip and received a number of points for their work. No one had ever done it before. Three students went on both trips. The class had picked wild foods around the UMSL Campus.

"There are 30 different kinds of wild foods on campus," said Redenbaugh.

On Oct. 31, the third annual Wild Foods Banquet was held in the J. C. Penney Auditorium. Wild Foods from the UMSL Campus were served. Some of the dishes included acorn bread, rose hip jam, persimmon pudding, boiled lamb's quarters, day lily bulbs and sassafras tea. "Most people think wild foods are going to taste sickening," said Redenbaugh. "But they are really good."

If you're itching to fly but don't have the scratch, the Air Force may have the answer. One of the benefits of Air Force ROTC is flying lessons. Enroll in Air Force ROTC, you're off, and the sky's no limit.

If college tuition money is a problem, Air Force ROTC may once again be the answer. If you qualify, you may find you can get one of the many college scholarships Air Force ROTC offers. And that would mean full tuition, lab and incidental fees, textbook reimbursement, and a monthly allowance of $100.00.

Not a bad deal. Flying lessons, free tuition, and $100.00 a month, tax-free to use as you like.

Sound great? Ask me how you can put it all together in Air Force ROTC. My name is Capt. Walker and I'll be on your campus 652-1022 as arranged.

Put It All Together in Air Force ROTC.

The Church Cathedral Choir will give a special Event song service on Sunday, Nov. 17, in honor of Ronald Arnatt's 20 years of service as organist and choirmaster of the Cathedral. The service will be at 4 pm.

The service will be preceded by a recital at 3 pm by choir members and assistants. Caroline Coomba-Stacey, Marion Bock, John Ullfors and K. B. Mehl will be among the performers. Music by a variety of composers, including some of Arnatt's works, will be presented on the program and during the service.

Arnatt has been associated with the Cathedral since he came to St. Louis in 1954. He is also director of the UMSL choirs, conductor and music director of the Bach Society of St. Louis and founder and di­rector of the Ronald Arnatt Chorale.

The public is welcome to attend the recital and service at the Cathedral, 13th and Locust, St. Louis.

Church honors Arnatt

Jazz Ensemble performs

The UMSL Jazz Ensemble, under the direction of Martin Behnke, will present its Fall campus concert at 3 pm, Sun­day, Nov. 24, in J. C. Penney Auditorium. Admission is free.

The Jazz Ensemble is a 22 member student organization consisting of six trumpets, five trombones, five saxophones and six rhythm. For its Dixieland numbers, the Ensemble breaks down into a seven man group.

The Ensemble will play a varied repertoire of 20th century jazz, from Dixieland of the 1920's to "Big Band Swing" of Count Basie in the 1930's, to more contemporary sounds of bands such as Stan Kenton and Buddy Rich.

Manipulating reality

Brook J. Hanke

"Indians" by Arthur Kopit; Loretto-Hilton

Technical sophistication is the key to the Loretto-Hilton's brilliant performance of Arthur Kopit's "Indians." The play is a modernistic, political event and the plot, the plot. The Standing Rock key to the Loretto-Hilton's "Indians." Earlier Commission and the framework for flashbacks to any period in American history, Vietnam References and parallels to all are recognizable. And concentrate on the Indians. Not the chieftains, but the anonymous masked figures whose presence, music, or tempo of movement control all the scenes, whether they are physically there or not. They are the theme.

Go to see this play. It runs through Nov. 16. I have never seen its better in St. Louis, nor in New York. If you don't you will kick yourself. You will miss a treat. You will even miss Geronimo in a cage!!

Gregory Marshall

I walked into the University Center at UMSL last Friday about 12:30 pm, which appears to be in steep competition with The Newman Center for the campus's leading stringboard for social intercourse. Upon entering, I immediately noticed, unlike the other times I've been through the SU, that something melodically and beautifully mingled in the air amidst the other amalgamated noises.

I looked at the students to see if they also had heard it, and from the lack of reaction on their faces, decided they were too busy to notice. Some lay sprawled over various sitting apparatuses; their faces scrunched vice-like between plugged and unplugged headphones. Others stuffed greasy burgers and dangling hot dogs into their mouths. Still others chattered, giggled, screamed, shouted, played social games of interest-disinterest. They slept; pretended to sleep; pretended to study; studied, really thought; played with sex; related on deep, pseudo-emotional, philosophical levels; and most abundantly they played cards.

They didn't notice, and if they did, they didn't care, but at the far end of the lounge, between the acoustic piano and the pop-art saxophone portrait, sat a bearded, middle-aged man on a stool playing a guitar. On his left, a tall, dark-haired bassist hunched over his instrument, moving the bow over the strings.

The two played for well over an hour, and the music they created was not glaringly loud beyond the point of distortion, or accompanied by flashing lights or acrobatic antics. No one danced around; no one stuck a knife in his organ (so to speak); no one wore dazzling costumes; no one smoked pot. There was no smoke, dry ice, pillars, balloons, manikins, explosions, etc. There was nothing but music; lyrical, rhythmic and explorative; created spontaneously by two very capable musicians.

But then, perhaps music isn't enough for the UMSL student. Perhaps it's too much. At any rate, I hope that those students in the SU that day weren't too inconvenienced by the music of Luke Harris and Gary Lawrence. Some seemed slightly annoyed when they applauded. After all, in order to do this, they had to set their cards down.

Rivermen reach regionals

Belas Flanchbough

Post season is a new season. Despite the indignity of four losses, the injury-riddled UMSL soccer Rivermen have been tabbed for the NCAA Midwest regional tournament for the third consecutive year. Out of this four team tourney will come the Midwest representative to the NCAA Division II championships to be held at UMSL on Nov. 28 through the 30.

The four teams competing for the Midwest Regional went to Eastern Illinois University, Western Illinois University, Illinois-Chicago Circle and UMSL. The number one seed in the Midwest region went to Eastern Illinois, number two position to Western Illinois, number three to UMSL, and the fourth to Illinois-Chicago Circle.

The teams will pair off with the number one seed, Eastern Illinois, facing the number four seed, Illinois-Chicago Circle at Eastern Illinois, and with Western Illinois, the number two seed, hosting UMSL.

For the season Eastern Illinois finished with a 7-3-2 mark. The Rivermen, in the course of the regular season, defeated Eastern Illinois 3-1 and beat Eastern Illinois 2-1 to reach the finals.

In Ill. with host UMSL on their home field Saturday. The game was a scoreless tie, UMSL put together several good scoring drives.

UMSL, on the other hand, came into the game with a 6-4-2 record, recently defeating Rockhurst 6-0 and Washington University 4-1 in their last two outings.

The outcome of the game was a scoreless tie. UMSL put together several good scoring drives.

UMSL outshot the Leather necks 20-11 which included 5 shots off the foot of Mark LeGrand and 5 from O'Neill.

So UMSL wraps up the regular season with a 6-4-2 record and turn the tide now to the NCAA Finals hoping to repeat the performance of last year's finals and come away with the NCAA Division II Championship.

Women finish high in state meets

Facing the challenge of state competition and sportsmanship, the UMSL women's field hockey and volleyball teams entered the championship tournaments with high hopes. Though both teams failed to gain a state title each finished well up in the standings.

UMSL volleyball team traveled to Cape Girardeau, Mo. for its tourney and came away with a record of 7-7, good for a fourth place tie.

Dropping the opening round to Southwest Missouri State 15-3 and 15-1, the women scored wins against Stephens College, F.E.N.O., three wins against the University of Missouri-Kansas City and a win over Central Mo. State.

On the very same weekend the UMSL field hockey team traveled to Columbia, Mo. for its state field hockey tournament, where they finished with a 0-1-2 record and a third place finish.

The UMSL women faced Northeast Missouri State and Southeast Missouri State by an identical score of 0:6 and lost to St. Louis University by a 1-0 tally.

The number one finisher in the field hockey competition is still to be decided between University of Missouri-Columbia and Southwest Missouri State. These two teams will meet this weekend in a playoff match to determine the outcome of that title.

Judie Whitney, director of women's athletics at UMSL, commenting on her two teams said, "Everyone in the Riverman athletic department is extremely pleased with the success our women have had this year. The women have worked and practiced hard for their respective sports and should be proud of their accomplishments."
