Grobman Addresses Past, Future Of UMSL Campus

Arnold B. Grobman, Chancellor of the University of Missouri-St. Louis, told an audience of more than 350 community leaders and educators that he believes UMSL is on the cusp of a "decade of maturation." His comments were made to Missouri Chamber of Commerce's "Chamber on Campus," an event to celebrate the 30th anniversary of the Clarion Hotel at May 30. In his address, Grobman reflected upon the university's past, including the height of the "Student Revolt" movement, and the challenges he foresaw in the upcoming decade.

"We have come a long way since the student demonstrations of the late 1960s," Grobman said. "We have grown in size, in scope and in diversity. We have expanded our academic programs and our research activities. But we must remember that we are still a relatively young institution, and we have much work to do to reach our full potential.

Together, this has been established to provide high-quality content. Dr. Graham also said that he had interviewed representatives of the Coordinating Council for Higher Education, the University of Missouri Board of Trustees, and the University of Missouri system. The CBHE also reviewed all grants available to the University of Missouri, as well as private foundations.

In some instances, curators recommended that certain topics be expanded or included in their reports. For example, the Curators Review recommended that more information be included on the history of the University of Missouri system. The CBHE also recommended that the University of Missouri system increase its access to higher education, particularly in the areas of graduate and professional programs.

Mr. Stickler thanked those who collaborated on the writing of this report. He noted that many years of planning and preparation were necessary to produce this report. He also expressed his appreciation for the contributions of the many people who worked on this report, including the authors, editors, and reviewers.

**Book reviews**

**“Faces “ Looks At Major Sci-Fi Writers**

Lorne Richard Klahs

*New York,* October 1984

In a book marketplace already overcrowded with rock titles, what would you stand out from the crowd? High-quality production, catchy songs, and keen marketing.

Personally, I feel that the most important factor is the songwriting. A song can stand on its own merits and still be a hit. But if the arrangement is poor or the recording is lackluster, the song may not reach its full potential.

One of the most important aspects of songwriting is the melody. A strong melody can make a song memorable, while a weak one can make it forgettable. The lyrics of a song are also important. They should be meaningful and thought-provoking, not just random words strung together.

In this book, the authors have selected some of the best songs from the last decade and analyzed them in detail. They have also provided insights into the songwriting process and the recording industry.
