Alcohol Awareness Begins Monday

Daniel A. Kimack

In an effort to promote campus awareness of alcohol misuse, UMSL officials, student groups and outside organizations will sponsor a series of programs designed to enhance awareness of the dangers involved with alcohol.

According to Rick Blanton, assistant director of Student Activities, alcohol awareness programs will begin Monday. Events throughout the week will include educational seminars and concerts.

"We're getting what we asked for last year and adding different things this year," Blanton said.

"This is not a program that says aren't various or that person a drink. We want the students to know what's at stake.

The UMSL Office of Student Activities, Student Health Service, the Counseling Service, the Women's Center, and Delta Zeta Sorority are campus groups involved in this year's project. Grey Eagle Distributors will help sponsor the project.

Approximately 2,008 colleges and universities nationwide participate in Alcohol Awareness Week, according to the NASPA Forum. The week will be sponsored nationally by the National Institute on Alcohol Abuse that includes, among other groups, the Association to college Universities International, Beta Chi Rho (Beta Alum Amicus Concerning the Health of University Students), the National Association of College Alcoholism, and the United States Public Health Service.

Blanton said that although UMSL is not a commuter campus, it is still important to reach out to and inform students.

"We could take the attitude that when the students go home we don't have any responsibility," he said. "But we can try to reach out to them before they have a problem."

The study, sponsored by the National Institute on Alcohol Abuse and the National Institute of Mental Health, found that 14% of freshmen entering college report no drinking at all. Students who drank at least once a month were more likely to have a higher number of wine and beer drinks per day. There was also a higher rate of binge drinking among women, the report concluded.

The report's authors argue that the widely-held assumption that many college students do not drink is not true. They also write that drinking by college students is a Problem of national significance.

The authors call for state and federal legislation that will reduce the accessibility of alcohol, but they blame the government for not doing so.

Sitting at a desk in the Chancellor's Office, Blanton said that the project is a "way for us to reach the students,"

"We want them to drink in moderation and not to get drunk."

The project is a collaborative effort between Student Activities, Student Health Services, and the Counseling Service.

The following week will include educational seminars and concerts.

"We're getting what we asked for last year and adding different things this year," Blanton said. "This is not a program that says aren't various or that person a drink. We want the students to know what's at stake."

The authors call for state and federal legislation that will reduce the accessibility of alcohol, but they blame the government for not doing so.
Survey of campus drink show that over 40 percent of college students drink alcoholic beverages. Included in the project are people who take an occasional glass of wine during dinner or at a cocktail hour on a hot afternoon.

A figure more revealing, however, is the statistic that between 10 and 10 percent of those students who may be problem drinkers—students whose use of alcohol results in "significant and frequent negative consequences for social, academic or personal relationships"—has increased at the University of Southern Illinois at Edwardsville, the National Association of Student Personnel Administrators, Inc. found.

What is more significant is the fact that the campus officials and other organizations, the ever-present danger of a nuclear wine? In the negative effect on singer Harry Bellefonte. show, but didn't include equality our own American investors. He feels that Vincent Barnes, who also spoke at the Barnes, who also spoke at the Current, financed in part by stu­dents attending the University of St. Louis, Mo. 63121.

Articles labeled "commentary" or editorials expressed in the opinion of the individual editor belong to the individual editor. No letters with libelous material will be published. The Current reserves the right to refuse publicat io n of letters that it deems in poor taste. No letters with advertising inserts will be published. Letters, including both editorial and advertising, must be included. Any letters not used for reasons of space limitations. The chancellor also stated that his office has a special fund for entertaining expenses as well.

Oberman said that his post on education is a reference to the UM President's recommendation to the Board.

**Commando** Differences From ‘Rambo’

**Jimmie Schwartz**

**Studall: Schwarzenegger’s English is improving.** His serial killer film, “Commando,” has several weaknesses. Prior to arriving in the US, he had not heard of “Commando.”

**ACTION PACKED: Armand Schwarzenegger stars in “Commando,” a violent action movie. A retired commando who feels forced back into action.**

**movie review**

slightly above the usual. “Commando” is a brush diversity from “Rambo.”

**Bergman, director. VHS/Beta.** It’s the year of the commando. By adding new voice-overs, sound effects, and music, this film hits all the right notes. A new entry from Unicorn Video, “Commando,” is up-to-date with this type of program. It’s the year of the commando. With the release of “Commando,” the movie is set in the future, with a war against an alien threat. The story is about a group of commandos who are hired by a government agency to save the world from a threatening alien species. The group of commandos, led by a tough and experienced leader, must fight their way through various obstacles and battles to save the world. The movie has action-packed scenes, intense combat, and exciting moments that keep the audience on the edge of their seats. Overall, “Commando” is a thrilling and captivating movie that showcases the skills and abilities of the commandos as they fight to save the world.
Cougars Rough Up Inconsistent UMSL

Russell Muenks: Little Big Man Comes To UMSL

Dan Noskowiak

For Russell Muenks, his UMSL men's basketball team is a place where it doesn't matter what his name is, as long as his height is 6'2".

``Many teams have overcome the height disadvantage," says Muenks. "I played against teams with 7'2" players, and I just had to find a way to get past them." Muenks was a star for the Cougars, averaging 16.1 in his last season. He was a valuable player in the basketball team, as he was once described as a "giant" for his size.

``I have always been known for my strength and speed," Muenks says. "I never thought I would be so successful in the sport." But his success has not come without struggle. Muenks says that he had to work hard to get where he is now.

``I had to learn how to play against taller players," Muenks says. "I had to learn how to use my speed against them." Muenks says that he would never have been successful without that hard work.

``I was never worried about being "tall" about it," Muenks says. "I was just worried about being successful."
