University to sponsor blood drive

by DeLange Robinson

In response to the region's urgent need for blood, UM-St. Louis, in conjunction with Gateway Community Blood Services, will hold a blood drive October 9, from 9 a.m. to 5 p.m., on the first floor of the Millennium Student Center.

Deborah Schoenberger of UMSL Health Services said, "Dupont's room draws a lot of blood donations from students, we thought we would hold a blood drive in cooperation with Blood Center of America, which is the October 5 date as a perfect timing because we have fall break for three days."

"The blood they have now is only good for 40 days, so we need a continual ongoing supply," Schoenberger said. She pointed to the October 9 date as a perfect time to replace supplies.

The drive will be held by the Blood Center of America, which analyzes and processes information on specific blood needs, will be able to have that information for Gateway and other blood plants.

Some blood products, like platelets, can be frozen and last up to a year. However, she said, "That's not a component that they can use yet.

"There still is the need for whole blood, which has a 42-day lifespan, and plasma, which only lasts five days. They are in desperate need of platelet supplies, which is the drying of plasma. They will be drying what we feed, as well as taking whole blood.

Please, drop by the Student Center to up-iscoming graduating opportunites in the job market.

The consumer confidence report released this past week states that consumer spending is in its lowest point in the past 17 years. This is mainly triggered by the consumer's unwillingness to save during today's times.

In an article pointed on MSNBC.com on Sept. 26, Mark Zandi, chief economist of Econometrics.com said, "Consumers are getting tailed on all sides. Selfish announcements are spanning, unemployment is soaring, and the attack certainly must be having an impact on our psyche." There is hope that the consumer confidence will be on the rise as unemployment rates go down.

Some of the major industries affected the most by these events are the airline, hotel and tourism industries. Many of these industries have already announced layoffs and some even on the bookshelf.

To take some stress off of the airline industry, Congress has approved $13.5 billion in aid for the devastated industry, which was granted for salaries following the tragedy. The other industry that is affected is the tourism industry. Many of the major companies involved in the tourism industry have also been hit by layoffs.

The Dow Jones has seen a rise in the past week, closing out the week up 3.1%. The Dow Jones also saw a rise, closing the week up 7.8%. But the markets haven't taken a hit.

With many of the major industries hit, and the consumer's unwillingness to spend, economists expect the nation to be heading for a recession.

SGA votes unanimously on student court

by Rashid Pittman

Student Government Association President Ryan Conner voted "yes" on an issue involving The Current that a Student Court would have to be created by Sept. 25.

"This has to be a very quality group of people," he said. "This promise was delivered last Tuesday at the first SGA meeting of the year."

Conner congratulated Michael Reitzke, a former SGA Vice President, D. Mike Bauer, a former student court director, and Angela Pugno, a current student court member.

"After much deliberation, some of us were frustrated with the number of people who were being screwed up by our Student Court," Conner said. "I'm very excited that we're getting parking tickets back."

In years past, the main job of the Student Court was to hand out parking ticket Appeals before it was stripped of that duty as early as July by the University. Currently, appeals are being decided by student, staff and faculty members.

"Of course, some of us are now worry," Conner said. "We're screwed up by our Student Court most of the time."

Conner said student courts in the past had voted in favor of hundreds of appeals, some of which were ignored. One of this goal this year was to get more back into the hands of the Student Court, he said, but not at least.

Parking ticket issues have been a major headache for the university and students alike.

"Our parking ticket issues have been a real sticking point," Conner said. "I'm very excited that we're getting parking tickets back."

SGA President - Ryan Conner

Student Court Chairperson - Michael Reitzke

Assembly: Michael Reitzke, D. Mike Bauer, Angela Pugno

Approval: Conner, Ryan, Steve Morgan, Avery, Bauer, Comer, Gidney

"The most important thing we've gained is that more people are involved with the Student Court," Conner said. "The most important people bodies are meeting if you vote for the Student Court."

"The most important people bodies are meeting if you vote for the Student Court."

"We have a better grip on how things work, around here," Conner said.
Monday's Performers: Series

Wednesday Sports.

Biological Society.

Wednesday 3 - Crusade for Christ.

College Republicans.

Musical Department.

Biological Society.

Res. Hall & Delta Sigma Pi.

Thursday 4 - Crusade for Christ.

Catholic Newman Center.

Sunday 30 - Crusade for Christ.

ASUM: The Associated Students of the University of Missouri

Legislative Internship

Applications Due: Wednesday, October 3 by 5 p.m.

- Receive Six Hours Political Science Credit
- Make Sure UMSL is Represented
- Become a Registered Lobbyist
- Gain Real Political Experience

Interviews Friday, October 5

Pick up an application at the ASUM office in 276 Millennium Student Center. For more information contact Professor Terry Jones.

UML grad student explains why

BY SARA PORTER

Donna Russell is an education major studying for a Ph.D. in education psychology and cognitive thinking and a technology alumni who taught the elementary and secondary level for fourteen years, she decided to move on to the graduate level.

"I was interested in how to improve myself in the study of my profession," Russell said. "Some professors left me floundering in the materials, as I wanted to find more.

Russell, like many other professors who want to move higher in their field, chose to be in graduate program. The graduate program is run more smoothly and more independent. They are the graduate program in the end, the students are more independent. They are the instructor's involvement, the students are more independent.

"The reason for that is to help them, to get them to an independent. Every student has their own research for their book, for their Ph.D. or Masters. The instructors can do it for the research for their book, for their Ph.D. or Masters. The instructors can do it for the research,

Russell, who are already in their professional life, are interested in the graduate program in a way to help them and also as an instructor. To help them, the undergraduate level, the students are interested in the undergraduate level, the students are interested.

"The reason for that is to get them to an independent. Every student has their own research for their book, for their Ph.D. or Masters. The instructors can do it for the research for their book, for their Ph.D. or Masters. The instructors can do it for the research,

After completing her B.A. and M.A. in Communication at St. Louis University, she got her Ph.D. at the University of Missouri-Columbia. She is now a professor of mass communication at the University of Missouri-St. Louis. She is known to her students as the professor who brings dress to her classes. Her classes are filled with personal interviews with major figures in broadcasting as a reward for the students. These student interviews help her students with their research on the history of broadcasting.

"In terms of the exact location, we put it this way, he can look out of his window and see where the "Tunny Show" crowd sounds every morning. In terms of the office itself, it features a few family photos but no network standards, the sorority spends any money that's not needed to run the sorority.

Moreover, Dr. Murray explained. Tom Brokaw has been anchoring the NBC Nightly News for over twenty years, he has been leading anchor for nearly twenty years of that time. He has written about some of the heroes of World War II. In Brokaw's latest book, his perspective is on the lives and deaths of soldiers in WW II, "The Greatest Generation."

"We don't talk much about his book. "The Greatest Generation."

But we did talk a little about the success of the book and the effect of his book on our book club. As a result of that, he got a lot of requests from World War II groups. He told me that project and it's a success," said Murray.

Dr. Murray interviewed with Tom Brokaw involved around important broadcasts he's done, including his reporting on the fall of the Berlin Wall. Brokaw was the only American correspondent reporting live from the scene as it was falling down in Germany.

Murray also said. "Many of the journalists to talk to his major projects are often at the end of their careers or die close to retirement. That was true with both Walter Cronkite and David Brokaw. That's why they are not quite as popular among the current generation. In the current generation, the most interesting interview is probably the one with Tom Brokaw because everybody knows who he is."

Doris Marie Bremer, Murray interviewed Andy Rooney of "60 Minutes" a couple of years ago. He did it for the research for his book about CBS News. He was investigating an old document film entitled "Black History: Love, Strife, and Strayed." He discovered that it had been written by Andy Rooney. So he wrote to him and asked about how Brokaw went about getting that film together.

His first request was complicated, he wrote Rooney again. "He told me that the host of the program, Bill Brokaw, was initially skeptical with the world that's expanded. It's all worth it. This took place over a period of weeks in terms of finding my funding a copy of the film, which he did, and getting feedback about it. Since it became quite clear that everyone backed out of the deal on asking by black people, the news was difficult to deal with.

"The reason for that is to get them to an independent. Every student has their own research for their book, for their Ph.D. or Masters. The instructors can do it for the research for their book, for their Ph.D. or Masters. The instructors can do it for the research," Russell said.

"I want to give something back to my profession, to the instructors. One advantage to a graduate student is the instructor's profession. Russell and Hesp said.

"We have full-time instructors that are experts in their field. Hespoud and Murray said, ""The instructors deal with current issues, while the graduate instructors teach different aspects in their area of expertise."

The individual aspect of the grad program is a challenge for the students. He found it difficult to say goodbye to his former students. "I missed my babies, but I will be able to contribute my voice to their study," Murray said. "Studied is a very nice place with my field, so it does give a bit of comfort.

For students who are planning for a graduate program," Murray said. "It's exciting and it's something that they should love to do. I would recommend it."

"As a whole, it's very impressive and very attractive. It's very involved, very attractive, and very exciting."
Call to serve: much more to it

After reading the article by Charles Bulley (last week), I felt compelled to offer a different perspective to that which was used to sell the military reserves and National Guard who may be invited to support Operation Iraqi Freedom.

As you know, the U.S. military has turned after the attack student strike, created into something which is not used to sell the military reserves and National Guard who may be invited to support Operation Iraqi Freedom.

I am a veteran of the U.S. military and I can't see why the American people should be called upon to serve in a war which has not been justified in the way that it was in Vietnam or World War II.

One win in last five contests puts men in last

by David Kinworthy

After giving nationally ranked Lewis University of Frankfort heads in a Great Lakes Valley Conference matchup, the Rivermen's season saw a dip in 2-4 after they defeated SIU-Edwardsville this season.

SIU-Edwardsville dominated the first half as they scored all four goals in the first half. The Rivermen failed to get a shot on goal and the game was 1-0 at halftime. In the second half, the Rivermen scored a goal and then SIU-Edwardsville added another goal in the 72nd minute to secure the win for the Cardinals.

Rivermen head coach Rick Gyllenborg said, "We are very new, but it is getting better every game. It is a process of getting better."

"We are just getting used to the fact that we are playing against teams that are really good," Gyllenborg added. "It is a learning process, but we are getting better every game."

The Marx Brothers Splashed in "Duck Soup" at City Museum

The Marx Brothers' release of "I Want to Be a Movie Star" was a smash hit in 1932, earning them a place in history as one of the most successful comedy teams of all time. However, it was their subsequent film, "Duck Soup," released in 1933, that really cemented their legacy as Comedy Kings.

"Duck Soup" is a hilarious satire of 1930s politics and culture, featuring the Marx Brothers' signature humor and social commentary. The film follows the story of Tousey T. Tots, a small-time mayor in a remote town, who runs afoul of the powerful Mayor of Manhattan, played by Harpo Marx. As the two leaders battle for control of the town, the Marx Brothers' zany antics and witty one-liners keep the audience in stitches.

The film's release on October 11, 1933, was a massive success, grossing over $1 million at the box office and earning the Marx Brothers a place in movie history. "Duck Soup" remains a beloved classic of the Golden Age of Hollywood and a must-see for fans of classic comedy.

The Marx Brothers' unique combination of physical comedy, verbal wit, and social commentary made them a force to be reckoned with in the world of entertainment. "Duck Soup," with its satirical take on politics and culture, is a testament to the Marx Brothers' enduring popularity and influence on the world of comedy.
**Matchbox 20 reminds us**

**St. Louis to relish life**

**by Charlie Boyett**

Matchbox 20 will walk it all down at Riverport, their own home turf and also their birthplace. It is no surprise that they know the area well. Although the band members have never performed on their own turf, this is their first official show here since their band formed 14 years ago.

**The Musketeer’s fight scenes like no other**

by Joan Henry

The Musketeer (1948), a film directed by John Ford, is a classic of its genre. The story follows the adventures of the three Musketeers, Athos, Porthos, and Aramis, as they fight against the evil Cardinal Richelieu and his minions. The film is known for its beautiful settings, its fantastic sword fights, and its memorable characters.

Organisms prove that size doesn't matter

by MIKE BIRLEY
Science Writer

We humans are large animals and we belong to a group of animals, the mammals, which are relatively large. Being that we are large animals we tend to notice the features of the enviroment that are also large. We notice the animals, plants, and geological features that fall within a certain size range. This aspect of our biological heritage makes us miss many features of our environment that do not fit into the size range.

The majority of life on earth falls into the range of 1-100 micrometers. This is the size range of many single-celled organisms. Single-celled organisms are the most influential types of organisms on the planet. Microbes, like Dr. Lynn Margulis, have cited research that shows that the dry et, or orgonisms. Margulis research shows that these microorganisms make up this size range.

One of the questions that Dr. Margulis believes came from this ancient ancestor is the mitochondrium. The mitochondrion provide the cell with energy by producing certain chemical reactions. This energy production by mitochondria allows the cell to perform work in its environment. Another question that Margulis believes was once a free-swimming bacterium is the chloroplast. The chloroplast is the organ that allows plants to carry on photosynthesis.

Margulis research shows that these microorganisms were once free-floating bacteria that came in live inside the body of large cells millions of years ago. These bacteria eventually came to reproduce in themselves and form single cells. Margulis has spent over twenty years working on a theory known as the endosymbiosis theory. This theory states that many of the inside parts of cells called "organelles" were once bacteria that formed symbiotic relationships with one another. A symbiosis (planted relationship) is defined in biology as a close physical relationship between two different species that is beneficial to both organisms.

Personal
Congrats to a Special Nurse & her Husband! Congratulations on your new desk. The best of luck to you and your family.

To the gimp:
Be careful while driving in your OLS-mobile so you don’t injure your other appendages. Take care of your arm and leg and please keep those burrs warm!
UM system Pres postpones retirement until 2003

BY BRENNEN CLAFLIN
The Chancellor

GWILYS COLUMBUS, Mo. — The University of Missouri System Board of Curators Tuesday evening elected President Pascal M. Mbratu’s contract to stand until 2003.
