Proposition A passed
St. Louis County passes Proposition A

MATTHEW B. POPOSKY
Staff Writer

Last Tuesday, Proposition A passed on the April ballot with 63 percent of the vote. The passing of this bill means that throughout St. Louis City and County, there will be a half-cent sales tax increase.

This increase in sales tax will immediately benefit and provide revenue for the restoration and expansion of MetroLink throughout the Missouri and Illinois lines by generating an expected $75 million a year in revenue for public transit.

This bill’s implications for residents of Missouri and Illinois go far beyond a simple sales tax increase, however.

The actual services planned within the past year alone include restoration of service cuts, along with expansion of all Metro services. There will also be extensive future growth to services, using public input to help plan for development in high-need areas first.

This will also lead to economic development, as more service areas for MetroLink will allow for employees to reach jobs, and will allow for greater access to the community.

Many University of Missouri-St. Louis students showed a positive reaction to the future implementation of the sales tax.

“I’m in support of this tax. I’m more than willing to pay an extra half-cent sales tax to help pay for MetroLink. A lot of other places around the world, like Europe and China, have great public transportation, and St. Louis has been struggling just to keep what they have open, much less to expand. I say go for it, tax us a little bit. It will help with expansion,” Casey Kell,

UMSL works to improve registration rates

STACY BECKENHOLDT
Copy Editor

On April 5, registration for summer and fall classes at the University of Missouri-St. Louis began for currently enrolled senior, graduate and doctoral students followed by freshmen-, sophomore-and junior-level students registering on April 12.

"The first two weeks of registration for both fall and summer, and winter intersession and spring, are reserved for students who are already here," Alice Gadel, Office of the Registrar, said. April 19, 2010 is when open registration starts for all other students. "Fall term and summer opens up at the same time, so probably our busiest time would be the open registration days when open registration begins," Gadel said.

Students have the option of registering online through MyGateways MyView system or in person at the Office of the Registrar located in room 351 of the Millennium Student Center. Gadel explained that since the inception of the MyView system, she has not noticed a difference in the number of students who register in her office, just an increase in the number of phone calls the office receives requesting help registering through MyView.

Either way, Gadel stressed that helping students with whatever they need is of the utmost importance. "We really, really, really try our best to help students and give them what they need to get done, whatever it is," Gadel said.

While Gadel and her coworkers assist students through the registration process, Alan Byrd is doing what he can to send more students their way. "We are sort of underperforming as an institution," Byrd, director of admissions, said. "We are a selective institution and [retention] rates don’t match that." According to Byrd, the low end of retention rates for first-year students is 75 percent, yet UM-St. Louis is only at 72 percent.

In comparison, UM-Columbia has an 86 percent retention rate, and UM-Kansas City’s is 76 percent. Of the universities with which UM-St. Louis competes for students, the top six are UM-Columbia, Missouri State, Southeast Missouri State, Truman State, Lindenwood and Southern Illinois University Edwardsville. Additionally, UM-St. Louis is not meeting the national average for any demographics.

UMSL students win big at local advertising awards

> RYAN KRULL
Staff Writer

The University of Missouri-St. Louis was well represented at this year's local ADDY Awards with four students taking home honors. The ADDY Awards are "the world's largest and arguably toughest advertising competition," according to The American Advertising Federation (AAF).

The awards recognize excellence in radio, television, print and a variety of other forms of advertising. Winners of local ADDYs may move on to the regional and then national levels of the competition.

The three UM-St. Louis ADDY recipients were Erika Drebber, Kerry Manderbach and Katharyn Mag raw. Drebber, junior, media studies, was the UM-St. Louis' biggest winner in the competition, winning two awards: a Student Gold ADDY for her "Mini Cooper" newspaper ad and a Student Silver ADDY for her "UMSL College of Nursing" logo design. Manderbach, senior, media studies, won two Student Silver ADDYs for his "Zoo Date" radio ad and his "It Takes U" television spot. Magraw, senior, media studies, rounded out the mix, winning UM-St. Louis' fourth Student Silver ADDY this year for her "Zoo Board Reconnect with Your Family" advertisement.

Overall, UM-St. Louis students received five of the six student ADDY awards this year.

The ADDY Awards Show and Celebration was hosted by the AdClub St. Louis and took place Feb. 18 at The Lounge in downtown St. Louis. The ADDY awards have been in existence for over 50 years. Drebber's Gold ADDY marked the third time a UM-St. Louis student has won the award since 2006. In that timeframe, UM-St. Louis students studying advertising have also received 16 local certificates of excellence from AdClub St. Louis.

After winning gold in St. Louis, Drebber's "Mini Cooper" ad has advanced to the regional ADDYS in Lincoln, Neb. Judging for this competition took place March 19-21, but the results have not yet been announced. UM-St. Louis has had success at this more prestigious level of competition in the past. The school won its first regional ADDY, a silver, last year.

Manderbach was upset about his win as well as the event itself. "The ceremony, for the students, is all about networking with professionals in the ad industry and being recognized for our work in the classroom. This can translate into opportunities in the real world after graduation," Manderbach said.

Fellow winner Magraw treated the event as both a fun and educational experience. "You get to see everyone's work on display, including your own," Magraw said. "So it's a great way to familiarize yourself with each agency's work. There is always free beer and hors d'oeuvres and everyone pretty much walks around and mingles until the awards film is shown."

"UM-St. Louis students are in sync with this award because they care about their work; in fact, they love it," Kristy Tucci­ crone, assistant teaching professor of media studies at UM-St. Louis, said. Tucci­ crone is also a co-chair of the local ADDYS but was not involved with the judging.

UM-St. Louis' success at the ADDYS comes in the wake of another UM-St. Louis student earning major recognition. Nicholas Foster, senior, media studies, was included in the AAF's 2010 list of Most Promising Minority Students.

PROPA, from page 2

There were other students who focused more on the impact this change will have on students at UM-St. Louis. Naturally this is a concern, as there are two dedicated MetroLink stations on the UM-St. Louis campus.

"There are quite a few students who depend on the Metro," Byrd said. "I know plenty who go to UMSL who use the Metro to get out to Brentwood, Union Station, etc., to work, because they don't have their own cars. The Metro also saves money for students and pollutants less than if everybody drove their own cars everywhere," Chelsey Maylee, senior, psychology, said.

There were also those who, although skeptical of the increased tax, were understanding and supportive of the tax's purpose.

"It's like a double-edged sword with me," MaryAnn Toulia­ tos, junior, political science, said. "I'm not sure we need more taxes, but the MetroLink does help a lot of people, especially my friends who don't have cars at UMSL. Lots of students use the MetroLink for school and work. It's also useful for sporting events, festivals, and parades downtown.

Proposition A's usage plans began last Wednesday as soon as the bill was passed. Any purchases made in the past week have already begun aiding in the restoration and expansion of public transit within the Missouri-Illinois MetroLink system. As St. Louis moves toward the future, public transit will evolve as well.

REGISTRATION, from page 2

"We're behind across the board," Byrd said.

Low retention rates can be a sign of dissatisfaction in students' experiences, and Byrd is taking steps to address their concerns.

This week, he will be meeting with people to put together a form that students can fill out with their concerns, and hopes to have a forum before the end of the semester where students can not only complete the form but also talk about their experiences regarding various aspects of campus life.

Two of the topics he is expecting to hear about are parking and food and he understands that UM-St. Louis needs to be competitive with other universities that may offer these and other things at lower costs and higher values. "We have to really evaluate ourselves across the board," Byrd said. He and his team will take the information they get from students and write a proposal of potential changes from students' perspectives.

Students interested in participating in the forum can find information about the date and time in a future issue of The Current or by listening to the UStudent Radio Station.

For assistance with course registration contact 516-5545 during regular business hours.

What do you think about news around campus? Let your voice be heard at thecurrent-online.com

WORLD NEWS

Justice Stevens announces retirement

Supreme Court justice John Paul Stevens announced his retirement from the bench late last week. His retirement will begin once the court adjourns for their summer recess. Stevens, who was appointed to the court in 1975 by President Ford has the distinction of being the second-longest serving justice to serve on the court and the only veteran serving there. A successor is expected to be nominated by President Obama following the beginning of Stevens' retirement.

Polish president killed in crash

Polish President Lech Kaczynski, his wife and 94 other Polish government, military and civilian leaders died last Friday when their plane crashed while landing in heavy fog in western Russia. President Kaczynski was scheduled to lead a delegation to commemorate the 70th anniversary of a massacre of Polish military officers by the Soviets during World War II. Despite the major loss in leadership, the government has carried on and has called for a national week of mourning.

US, Russia sign nuclear treaty

President Obama and Russian President Medvedev signed a treaty last Thursday agreeing that both countries will reduce their stockpiles of nuclear warheads by one-third and other nuclear hardware used to deliver them would be reduced by one-half. The agreement coincided with the debut of a new U.S. nuclear weapons policy which rules out the use of nuclear weapons against countries that do not have them and bans the development of any new nuclear weapons.

Video of massacre leaked

The website wikileaks.org has published a classified video showing an American military helicopter firing on unarmed civilians, and journalists, among others, in Iraq. The US military had previously maintained that the helicopter had fired on armed militants, and that the Reuters journalists had been accidentally killed. The video depicts U.S. pilots firing on civilians and the journalists in addition to a vehicle that arrived on the scene to evacuate the wounded, which resulted in the shooting of two children.

Sudan holds elections

Sudanese citizens went to vote in the first truly democratic election the country has held in over two decades on Sunday. The country has been in turmoil due to a 20-year civil war and the genocide in the Darfur region of the country. The elections will ultimately choose a national parliament and other leaders. The new government is expected to lay the groundwork for a referendum vote that may grant Southern Sudan and Darfur independence.

EU offers $40 billion to Greece

Members of the European Union moved to offer $40 billion in emergency financial aid to Greece on Sunday. The move is in response to the crisis of the Greek economy due to outstanding debts. European officials had been debating how to deliver a bailout package to the struggling country, whose debts have largely affected the economies of other EU member states based on the Euro. Greece has yet to say whether they will accept the aid.

**Stealing Over $500.00 - Parking Lot KK-South Campus**

Sometime between April 3rd and April 4th person(s) unknown broke into a parked motor vehicle and stole a car stereo system, CD's and a credit card from inside.

**Assault 3rd Degree - University Meadows**

About 4:00 PM a disturbance and assault occurred between boyfriend and girlfriend at University Meadows. Both participants are UMSL students. The victim indicated that her boyfriend had assaulted her and damaged some property. The suspect was arrested for the assault and transported to the UMSL Police Station.

**Property Damage - Parking Lot TT-South Campus**

During patrol of the South Campus parking areas about 6:30 AM, a vehicle was discovered to have been broken into. The officer observed a window had been smashed out and the contents of the vehicle rummaged through.

**Thursday, April 8**

**Property Damage - Parking Lot TT-South Campus**

At about 7:30 AM the victim notified the UMSL Police Department that her parked vehicle was broken into and items stolen from inside. The incident occurred sometime overnight or early morning. A stereo face plate and two power cords were stolen from inside the vehicle. There are no suspects in this incident.

Remember that crime prevention is a community effort, and anyone having information concerning these or any other incidents should contact the Campus Police. The UMSL Police Department and the St. Louis area have seen an increase in car break-ins recently where the suspects are targeting items in plain view. Be sure to remove all items from view in your vehicle. Please report any suspicious people or activity to the UMSL Campus Police immediately by calling 911 if it is an emergency, or the main number of 314-516-5155.

New era begins for basketball: Tappmeyer is new head coach

CEDRIC WILLIAMS
Sports Editor

A new era of University of Missouri-St. Louis men's basketball history began last Wednesday when athletics director Lori Flanagan made the formal announcement that former Northwest Missouri State head coach Steve Tappmeyer had been hired to the same position here at UMSL.

Flanagan made her announcement at a press conference held on the Chuck Smith Court inside the Mark Twain Building in front of many media members and several UM-St. Louis athletics department dignitaries, including the university's first men's basketball coach, Chuck Smith.

"We are delighted to name Steve as our new coach and welcome him and his family to St. Louis," Flanagan said. "Steve is an excellent choice for UMSL from every perspective—in terms of the basketball component, his ability to serve as a mentor and his skills as a proven leader. He is the right coach to lead UMSL men's basketball to the next level."

The UM-St. Louis men's basketball coach position became available on March 3, when former head coach Chris Pilz resigned after leading the team to a 12-16 record last season.

Pilz, a former All-American player and member of the UM-St. Louis Sports Hall of Fame, coached the Tritons to a 77-114 record in seven seasons as the head of the men's basketball program.

"We have a responsibility to our student-athletes here to provide the best environment for success in the classroom and on the athletic field," Flanagan said. "After evaluating the situation, we decided it was best for both sides [Coach Pilz and the university] if we made a change at the coach position."

Many among local basketball circles consider the hiring of Tappmeyer a blockbuster move for UM-St. Louis.

In 21 seasons as head coach at Northwest Missouri, Tappmeyer was the winningest coach in the history of that program, leading the Bearcats to a 408-208 record (a .662 winning percentage), while taking that team to 10 NCAA Tournament appearances, advancing as far as the Elite Eight twice.

"My wife, Lynette, and I are both thrilled and excited about this opportunity to be the head men's basketball coach at UMSL," Tappmeyer said. "Originally, the St. Louis region was an attractive element since we have so many friends and family in the area, but we didn't really know a lot about the university until a couple weeks ago."

"Since then we have been more than impressed with the people we have met and the things we have learned. I think it's an exciting time to be at UMSL with all the great things planned for the future. The administration has a great vision for both the university and the athletic department, and we are elated to be a part of that," Tappmeyer said.

Triton basketball fans are hoping the team can achieve some of the same success Tappmeyer had while leading Northwest Missouri to three Mid-America Intercollegiate Athletic Association (MIAA) regular season conference championships, four MIAA conference tournament championships, nine 20-win seasons in the last 12 years, and 10 20-win seasons overall.

Reaching those heights will be a bit tougher; the Great Lakes Valley Conference, which UM-St. Louis competes in, is always one of the toughest Division II basketball leagues in the country. Just this past season, nine GLVC teams finished the year with winning records.

Steve Tappmeyer: A big winner

CEDRIC WILLIAMS
Sports Editor

New men's basketball coach Steve Tappmeyer made no bones about the fact that he did not know much about the University of Missouri-St. Louis until he met with athletics director Lori Flanagan for lunch several weeks ago.

Tappmeyer had visited the campus several times recruiting and coaching against the Tritons, but he did not know a whole lot about the university itself until he and Flanagan met at the McDonald's restaurant in Pacific, Mo., to discuss Tappmeyer possibly taking over UM-St. Louis men's basketball program.

"It didn't take very long for Lori to sell me on what a great place this is," Tappmeyer said at the April 7 press conference to announce his hiring as UM-St. Louis men's basketball coach.

Flanagan said she also knew very quickly that Tappmeyer was the former Northwest Missouri State coach, with more than 400 career wins and 10 NCAA Tournament appearances on his resume, was the right choice for UM-St. Louis.

"I could tell right away that Steve is a person of high character," Flanagan said. "Obviously, he's had a lot of success as a coach and as a teacher of young men. That's why we wanted him to be our next head coach."

Flanagan and Tappmeyer met again at that same McDonald's restaurant about a week after that original meeting, this time along with his wife Lynette, to discuss more intensely where the UM-St. Louis men's basketball program was and where Tappmeyer believed he could take it to.

"I was sold that day," Flanagan said. "And now I hope our third meeting at that McDonald's will be for a party where we can all go to watch UMSL [earn a spot in the NCAA Tournament] on the NCAA Selection Show."

The Tappmeyers had their own discussion about the job after leaving McDonald's that day.

"My wife and I really talked about 'what feels right,'" Tappmeyer said. "And we both felt that UMSL just felt right. We were impressed with the aggressiveness UMSL showed in pursuing us. And the whole process was about as quick as I've ever seen a coaching hire happen. So we're both very excited."

Tappmeyer's resume of more than 20 years of winning, it was clear he was the right man for the job.

See TAPPMEYER, page 8
The University of Missouri-St. Louis women's softball team had a chance to climb up the Great Lakes Valley Conference standings when it visited Lewis University and the University of Wisconsin-Parkside (UWP) for a pair of doubleheaders last weekend.

With a good showing in those four games last weekend, the Tritons had a chance to jump from fifth in the GLVC to fourth, with the potential to be just a half-game behind third place Northern Kentucky heading into this coming week's action.

But the weekend did not go so well for UM-St. Louis, as the Tritons won just one of the four games it played on Saturday and Sunday, and remain fifth in the GLVC conference championship race.

UM-St. Louis will get more chances to make a move in the GLVC race this week, when it hosts three critical doubleheaders against league foes Missouri S&T, the University of Illinois-Springfield (UIS) and Quincy University.

The Missouri S&T doubleheader is scheduled for Thursday evening, April 15, at 5 p.m., and will serve as makeup date for the clubs, after two previously scheduled game dates were rained out.

Then this weekend, the Tritons will host two games against UIS on Saturday, and two more games against Quincy on Sunday.

Both those doubleheaders will begin at noon, and all six home games this week will be played at the UMSL Softball Field.

UM-St. Louis will close out the regular season on April 24 and 25, with road doubleheaders at Rockhurst and Drury.

Should UM-St. Louis remain among the top eight teams in the GLVC, they will be invited to compete in the GLVC Softball Championship Tournament.

This will be held May 7-9 at the East Side Centre softball facility in East Peoria, Ill.

Only the top eight teams will qualify, with the winner earning an automatic bid into the NCAA Regionals.

To make that happen, the Tritons are going to have to play better than they did this past weekend.

Against UWP on Saturday, UM-St. Louis lost both games to the Rangers by scores of 7-1 and 9-8. Game one was not a whole lot of fun as UWP jumped out to quick early lead.

But the loss that really hurt was in game two, where the Tritons led by four runs heading into the final inning, but could not hold close the game out, before eventually losing on a walkoff hit in extra innings.

Getting swept by UWP meant UM-St. Louis had no chance to finish the weekend higher than fifth in the conference.

This also gave the league's sixth and seventh place teams, Southern Indiana and Missouri S&T, a chance to tie or pass the Tritons for fifth.

That meant UM-St. Louis had to pull out at least one win on Sunday against 10th-ranked Lewis or risk the chance of falling in the league standings.

And in that first game at Lewis, the Tritons played like a team that knew it needed a win.

Right fielder and the team's No. 9 hitter, Brooke Meyer blasted a two-run home run, her second of the season, to get UM-St. Louis on the board.

After UWP scored a run of its own in the bottom of the third, the Tritons got that run back in the top of the fourth.

This was thanks to a sacrifice fly by Carly Maddock, senior, communications.

The big blow of the game though, came in the top of the fifth inning, when designated hitter-JaCee Ellis, junior, business administration, blasted a two-run homer of her own to put the game away for the Tritons, who won 5-3.

That deep launch over the wall was Ellis' eighth homer of the season, ranking her second on the team behind Katie Bartlett, senior, biology, who leads the team and the entire GLVC with 11 homers this season.

The final game of the weekend got out of hand quickly, as Lewis built a big early lead before eventually winning 10-1.
Bartlett leads record-breaking long ball crew

CEDRIC WILLIAMS
Sports Editor

Fans of the University of Missouri-St. Louis’ women’s softball team were concerned heading into the spring season that the Tritons might not have gotten enough work outdoors during the winter.

In some respects, that might be true. But one aspect of UM-St. Louis’ game that has not been negatively affected by not being able to work outdoors is the Tritons’ hitting.

This season, UM-St. Louis is flat-out blistering the ball when it steps to the plate. Heading into last weekend’s road trip at Wisconsin-Parkside and Lewis, the Tritons were the best hitting team in the Great Lakes Valley Conference. As a group, UM-St. Louis is hitting .323, not only the highest average in the GLVC but also one of the top-30 team batting averages in the entire country.

Quite a feat for the Tritons, who are looking to repeat as GLVC Regular Season Champions this year.

But the one aspect of their hitting that has really set the UM-St. Louis sluggers apart are their home runs.

The 2010 Tritons have bashed the ball out of the park at a historic rate. Coming into this season, the UM-St. Louis all-time record for team home runs in a season was 32, set in 2007 during head coach Chuck Sosnowski’s first season as coach of the Tritons.

But with just about a full quarter of the season left, the Tritons have already hit 42 homers this year, a total that completely dwarfs all the long ball totals of any other team in the GLVC, and clearly makes this UM-St. Louis squad the best home run hitting crew in school history.

Starting catcher Katie Bartlett, senior, biology, has been the long ball leader of Tritons this year. A right-handed swinger with serious blast in her bat, Bartlett leads the team, the league, and ranks 15th in the nation, with 11 homers on the season.

Bartlett’s 11 dingers also make her the UM-St. Louis individual single-season all-time home run record-holder, surpassing current Triton assistant coach Casey Dierkes, who hit 10 during that record-breaking 2007 campaign.

Bartlett became the “Triton Home Run Queen” officially when she launched that 11th homer of the season in an April 1 game at rival Maryville.

But Bartlett is not the only player on this team with a knack for whacking the ball over the fences. Teammates Jacee Ellis, junior, business administration, is second on the team with eight home runs this year.

Ellis launched her eighth homer of the year in a UM-St. Louis win over GLVC front-runner Lewis University this past Sunday. Those eight roundtrippers rank Ellis, who also plays catcher, but often serves as the Tritons’ designated hitter, tied for second among GLVC home run hitters this year.

Ellis’ blast at Lewis also had historical significance, as it made her UM-St. Louis’ all-time career leader in home runs. The Frankford (Mo.) native was tied at 14 career home runs with Bartlett and Dierkes. But she now holds the all-time record all to herself, with 15 career long balls.

It should be quite a race for the rest of the season to see who finishes as UM-St. Louis’ all-time leader.

Other Triton softball home run totals this season are: Karey Kruse, junior, special education, 5; Heather Arras, sophomore, undecided, 5; Megan Brusman, senior, business administration, 3; Leslie Davis, freshman, psychology, 3; Morgan Baugher, senior, business, 2; Sara Estopare, senior, communications, 2; Brooke Meyer, junior, criminal justice, 2; Haleigh Jenkins, freshman, undecided, 1.

UM-St. Louis Baseball winning streak was snapped at rival Maryville

MICHAEL FREDERICK
Staff Writer

On Saturday afternoon, the University of Missouri-St. Louis baseball team traveled to West St. Louis County for a double-header against the Maryville University Saints at Webster Field.

Coming into Saturday’s two games, the Saints sported the worst record in Great Lakes Valley Conference play, 3-15 and 7-23 overall.

Entering the one nine inning and one seven inning fixtures, the Tritons won four of their last five including a three game winning streak.

“We’ve been on a tear lately,” UM-St. Louis head baseball coach Jim Brady said. We have to keep playing sound fundamentally and keep swinging the bats well to help take care of business.”

The Tritons accomplished more than that in the first game of the double header. UM-St. Louis took advantage of a first inning error by Maryville. With Tritons senior right fielder and accounting major Matt Macke at first and one out, junior shortstop and secondary education major Andrew Kearney hit a mile high pop up on the infield into the cloudless, high sky.

The ball hit the palm of Saints shortstop Nick Little’s glove and fell onto the field.

UM-St. Louis capitalized with a two out, RBI single by junior designated hitter and accounting major Kenny Bechard.

In the top of the seventh inning, with UM-St. Louis leading 4-0, senior third baseman and liberal studies major Erik Walk continued his hot hitting with a two-run homerun smashed well over the right field wall and into the woods surrounding Webster Field.

“Erik is a real vocal leader of the team,” Drew Stanelle, leftfielder, freshman, undecided, said. Throughout both games Walk was the leading chatter booster on the infield.

“He’s someone whose really been hitting well,” Brady said. “He comes to play every day, and his enthusiasm is contagious.”

Including Saturday’s double-header, Walk has hit three homeruns in the past three games, two of which came against Webster University at Triton Bleacher Bash.

“We’re really grateful for student affairs for getting the word out about Bleacher Bash,” said Brady. “It’s always good to have a big crowd to support the team.”

Tritons junior starting pitcher Brandon Fear hurled a complete game shutout. The finance major from Edwardsville, struck out three hitters and walked only two as he frustrated the Maryville hitters with ground ball outs and several double plays turned by the UM-St. Louis infield.

Junior centerfielder and physical education major Danny Flores made an incredible diving catch in the bottom of the third inning to rob Maryville third baseman Robert Hatchep of extra bases.

“I had to cover a lot of ground, but once I had it, I tucked the ball under my body and made sure to hold on to it,” Flores said, who was playing the right-handed hitting Hatchep the other way into right center field.

UM-St. Louis was not so lucky in the second leg of the doubleheader. Despite stellar pitching from southpaw senior Gurdine Acklin, six innings pitched, three earned runs, and four strikeouts, the bullpen failed to secure the sweep.

Maryville tied the game in the bottom of the seventh forcing an eighth inning walk off infield hit off of Tritons Junior Media Studies major and pitcher Ryne Molek. With the split UM-St. Louis is still in the hunt for a GLVC conference tournament spot.

This Tuesday, April 13, the Tritons play host to NAIA Harris-Stowe at the UMSL Baseball Field on South Campus. First pitch at 3 p.m.
While the UMSL tennis team didn't fare well against Lewis on April 2nd. The men have won four straight matches since then and the Women have won three of four.

Pictured clockwise from upper-right: Aya Gombo, Jamie Lawlor, Stephanie Thompson, Andreas Hammar, Daniel Anthony. All games against Lewis on April 2nd.

"We are delighted to name Steve as our new coach and welcome him and his family to St. Louis," Flanagan said. "Steve is an excellent choice for UMSL from every perspective—in terms of the basketball component, his ability to serve as a mentor and his skills as a proven leader. He is the right coach to lead UMSL men's basketball to the next level."

At Northwest Missouri, Tappmeyer coached for 21 seasons and enjoyed all kinds of success. His official record there was 408-208, with three regular season conference titles, four conference tournament titles, and the 10 NCAA tournament appearances.

"Winning doesn't happen overnight," Tappmeyer said. "It's a process. We definitely want to be successful as quickly as possible, but a lot of things have to happen to make that possible."

Tappmeyer's first task will be to hire a staff of assistants. He said he hopes to begin filling those slots by the end of this week. Then he hopes he and his staff can get out on the recruiting trail and try to land some of those top players who have not yet signed with a school.

"We definitely plan to hit the ground running, so to speak," Tappmeyer said. "We're a little bit behind some of our competitors. But this is a great school. So we're in pretty good shape. I can't wait to get started."
**Courageous effort**

**MGMT’s 'Congratulations' is light on hits**

“Congratulations” is the second full-length album from electro-pop duo extraordinaire MGMT, and has come under a lot of scrutiny.

Within days of releasing taster track “Flash Delirium,” Ben Goldwasser, half of said duo, apologized for the song being “weird.” He has gone on to describe the album as more “honest” under the conceit that MGMT was always too weird to be as radio-friendly as “Oracular Spectacular” made them out to be.

It is a courageous position to take, considering the band is signed to a major label that has thrown millions of dollars around trying to make MGMT a household name. So that is cool.

Anyway, “Congratulations” is a distinct wave goodbye to the immediate dance sensibilities that songs like “Kids” and “Time to Pretend” featured. The wide-eyed independence and the bold, bright melodies “Oracular” featured catapulted MGMT to a level of popularity usually reserved for fandoms, so in some sense, “Congratulations” is a disappointment.

There was a lot of anticipation for this album to produce more smash hits, but MGMT simply is not handing out the hooks on a platter anymore. There is not even a distinct single. On the other hand, “Congratulations” focuses on some of the reticent obscure paths and experiment with them is pretty rewarding.

The Saint Louis Ballet’s production of Swan Lake was at the Touhill Performing Arts Center April 9 through 11.

**Mysterious ‘Swan Lake’ graces Touhill stage**

St. Louis Ballet brought the magic of Tchaikovsky’s “Swan Lake” to the Blanche M. Touhill Anheuser Busch Hall for four performances last weekend, April 9 through April 11.

“Swan Lake” is one of the most popular ballads, second only to “The Nutcracker” in frequency of performances around the world.

Yet while this city sees annual performances of “The Nutcracker,” the mysterious, magical “Swan Lake” is much less frequently performed here, which makes this production particularly welcome. The performance is the second of a trilogy of ballets being offered by St. Louis Ballet, along with “The Nutcracker” last December and the upcoming “The Sleeping Beauty” this summer.

Lifted by beautiful, hauntingly mysterious music, “Swan Lake” is more romantic and movingly emotional than many other ballads. The story is a fairy tale about a prince hunting in the woods, who finds and falls in love with a graceful white swan.

The swan is actually an enchanted princess who lives with her flock of enchanted ladies-in-waiting on Swan Lake, created by the tears of her parents, heartbroken over their kidnapped daughter.

At Friday night’s performance, the role of the swan was danced by Tanya Strautmann and the prince by Elliot Geola.

The first act begins in the palace garden where Prince Siegfried is celebrating his birthday with his friends. His mother (Lisa Wolfsberger) and his tutor (Michael Money) appear, presenting Siegfried with a crossbow as a gift. As dusk falls, Siegfried runs off alone to hunt in the woods, where he finds the swan Odette at Swan Lake. Moved by her story, Siegfried is about to declare his love, which would break the spell, when the sorcerer Von Rothbart (Octavio Nieto) suddenly appears as a large black hawk.

The second act takes place at the palace, at a ball where guests are entertained by Spanish, Russian, Italian and Turkish dancers.

The prince is expected to pick a bride from among the noble ladies. A disguised Von Rothbart appears with his daughter Odile (Tanya Strautmann), disguised as a human Odette but dressed in black instead of white.

The tricked Siegfried chooses her as his bride but then catches sight of the real Odette (Vanessa Woods). The third act returns to Swan Lake, where Siegfried and Odette reconcile and confront Von Rothbart. Siegfried declares his love, breaking the spell.

The choreography was classic and heartbreakingly beautiful. The ballerinas were transformed into swans by their graceful gestures. Slender arms dramatically raised overhead and lowered portrayed birds in flight, and a single arm arched overhead with bent wrist and graceful leaning pose conveyed swans in repose.

The principal dancers did a fine job, with Strautmann and Nieto standouts.

Young dancers from the company’s dance school appeared as young swans, in a charming touch.

The choreography included leaps and lifts, plus some impressive spins and plenty of classic ballet. While not as astounding as many performances by Dance St. Louis’ international stars, the dancing was artistic and audience-pleasing.

Sets were pretty, gauzy flats which skillful lighting transformed into a wonderfully magical world. Costumes were perfect, apart from the Queen in the first act, who was dressed in a green, mid-19th century hoop skirt, out of “Gone With The Wind” despite everyone else’s 18th century attire. One the other hand, the most striking, dramatic costume was Von Rothbart’s dark, ragged outfit, with large cape-like wings and finished with a hawk mask.

Overall, “Swan Lake” was a splendid, satisfying production of a wonderful classic, sure to inspire a new generation and delight current ballet fans. B+

Toes tapping, hands clapping at Kouyate and Ngoni Ba concert

The Center for International Studies' International Performing Arts Series brought a wonderful concert by Bassekou Kouyate and Ngoni Ba to the Lee Theater in the Touhill Performing Arts Center on April 7. It was an evening filled with African music, dancing, much applause and contagious smiles.

The evening started with a presentation by Aurelia Hartenberger, Ed. D., about the instruments used during the concert, some dating as far back as the 14th century.

After the presentation, the performance began with beautiful music by the musician Bassekou Kouyate and his musical group. It was fascinating to watch them play, dance, and sing with such happiness, passion and, of course, talent. They all wore lovely traditional garments of purple and gold.

Bassekou Kouyate is a master of the ngoni, a traditional West African lute. His music is called Bambara, which comes from the region of Segu. The African music is similar to the blues, and is considered by many to be the African root of that American music.

Instantly the crowd was transported to West Africa, a completely different world from the theater in which they were sitting. It was amazing to see just how many melodies came from those simple lute-like instruments.

The musicians dazzled the crowd with their fast fingers and beautiful guitar solos.

Yells of appreciation rang out both from the crowd and from the stage for these solos. As the tempo and the energy built, the musicians were in their own world, and the crowd enjoyed seeing them in that world. They were truly at home on that stage.

The audience was very appreciative of the music, judging from the gleeful applause at the end of each song.

As the concert went on, Kouyate would ask the crowd if they were happy and this was always met with a series of "yeses," applause and whirlies of appreciation. The beats were rhythmic and the singing mesmerizing.

As the hypnotic music played, audience members could not help but tap their feet, clap their hands and/or bob their heads.

See KOUYATE, page 21

CONGRATS, from page 9

"Congratulations" is not excessively hard to understand, nor is it overly pretentious in its obscurity. MGMT is taking elements of experimental psych-rock, new-wave and post-punk and giving them another modern outlet. The title track oozes Flaming Lips from. The fey vocal druggy an Eno are deferential.

'Metro 2033' game tough but worth it

Boy, the Russians sure love their post-apocalypse. Something about the aftermath of the downfall of civilization really seems to appeal to the Russian mindset, especially the younger generation. Russia's love affair may spring from a few things: Chernobyl, the most horrific nuclear accident ever to occur, happened right on their front porch. The popularity and success of the novel "Roadside Picnic" by the brothers Strugatsky and the movie "Stalker" by Andrei Tarkovsky are two other possibilities.

Post-apocalyptic video games are nothing new—"Metro 2033" is merely the latest addition. "Metro 2033" was released on March 16 for both the Xbox 360 and PC. While it may share its initial background with previous post-apocalyptic games, it takes this classic Russian trope and expands on it in a different way.

With the surface world becoming extremely toxic and uninhabitable after a nuclear war, humanity has been forced underground into subway stations. The player plays as Artyom, a young subterranean dweller in the Moscow subway system. "Metro 2033" was originally a novel, and developer 4A Games has expertly recreated the atmosphere of desperation and tension from the book. "Metro 2033" is harsh and unforgiving—definitely more realistic than its post-apocalyptic peers, that is for sure.

"Scarcity" is the name of the game, with virtually everything you can think of being in short supply. A gas mask is required to be on the surface and in some underground areas. Besides being easily broken in combat, gas masks require filters at an alarming rate. Thanks to the game's lack of a dedicated heads-up display, filters have to be monitored via a watch. Run out of filters or break the mask? Dead.

Ammunition is a commodity in "Metro 2033," literally. The best type of ammo, pre-war military-grade stuff, is also the currency of the Metro. With the more common post-war ammo being pretty inefficient at killing the various beasts and bad things that live underground, battles sometimes become a matter of cash or death.

This kind of conservation mindset is the game's greatest triumph. It forces the player to actually think like a subway dweller, and the lack of an HUD suddenly becomes a bonus, not a hindrance, bringing the player further into the game's reality.

From the filter timer to the rechargeable flashlight—if the player keeps his or her flashlight on for too long, it goes out and needs recharging, usually right before a creature attacks—the game screams immersion. It is too bad one never fully gets to enjoy that.

The game treads a slim path between "never seen before" and "tired, roughshod mechanics" the entire time. Sadly, "Metro 2033" plays like an arcade shooter without any of the arcade. The first level of the game is a veritable post-apocalyptic "Time Crisis 2" cabinet, literally taking place on rails.

Maybe players of post-apocalyptic games have been spoiled by open-world darlings "Stalker: Shadow of Chernobyl" and "Fallout 3," but the very fact that "Metro 2033" has levels is discouraging. For so unique and vibrant a world, there is no exploration apart from the minimal amounts included in the incredibly linear levels.

Linearity, difficulty and lack of decent gameplay aside; "Metro 2033" is worth a look by both newcomers and veterans of the post-apocalyptic genre. If one can work past the issues and really get into the game, it offers a great time and an experience like none other. B —Andrew Seal
Chopin memorialized in student piano concert

Last Thursday, the University of Missouri-St. Louis presented its Spring Piano Students Concert in the Blanche M. Touhill Lee Theater. The audience was packed with family, friends, and fans of pianist performance alike.

This year’s performance was a tribute to the life and works of famous Polish pianist and composer Frederick Chopin, a prodigy of the 19th century, commemorating the 200th anniversary of his birth.

The performance consisted of nine pieces of varying lengths and styles, each performed by a different student of Alla Volokobhylna, coordinator of piano studies at UM-St. Louis.

The performance was incredibly well balanced. The opening piece, “Polaonaise in C minor, Op. 40, No. 2,” was performed by Thomas Winkler, freshman, piano performance. The piece streamed at a medium pace, hinting at its partner in Polish dances: a slow, coupled march or promenade.

The second piece slowed things down a bit, as Shelitha Peppers played “Nocturne in C-Sharp minor, Op. Posthumous.” Much like its predecessor, the arrangement instilled feelings of nighttime dreaminess in listeners. Shifting at medium to slow progression, its notes reverberated throughout the theater, relaxing listeners.

Next in line was “Waltz in C-sharp minor, Op. 64, No. 2,” played by Hongjun Liu, freshman, business/music. As Liu proceeded to play, ballroom notes overcame the audience, bringing with them the notions and feelings of a time long since passed to the winds: a time of streaming dresses and cuff-linked gentlemen once again existed for the short duration of this gorgeous piece.

“Four Preludes, Op. 28,” played by Angela Mitchell, freshman, music education, followed, hinting at a variety of emotions from playfulness and intrigue to grief and loss. Finishing up the performance’s first half was “Sonata in B-flat minor, Op. 35, Grave - Doppio movimento,” by David Doran. Its varying tempos and moods led the audience comfortably into intermission.

Following an intermission that seemed, in all honesty, a bit too drawn-out, “Ballade No. 2 in F major, Op. 38” reaffirmed the performance’s hold on its audience. Performed by Meredith Johnson, senior, music education, its notes set a romantic mood throughout the audience.

A second polonaise followed, played by Eric Hammond, senior, piano performance. Although possessing the same name as the concert’s opening piece, there were stark differences. The most prominent of these was the difference in tempo, as this second polonaise had a much more uplifting, energetic mood to its notes.

“Fantaisie-Impromptu, Op. 66,” performed by John Nuckols, junior, music education, followed. Much as its name would imply, the piece instilled feelings of a fantastical world in listeners. These feelings of lightness and eternal bliss lasted only a short while, however, as the final piece claimed its time.

See CHOPIN, page 21

Noomi Rapace and Michael Nyqvist star in ‘The Girl with the Dragon Tattoo’ as a detective team set on solving a decades-old disappearance.

Bestseller ‘Girl with the Dragon Tattoo’ makes taut thriller

“The Girl with the Dragon Tattoo” is an entertaining crime thriller based on a bestselling novel, with an engaging plot built around a 40-year-old mystery, computer hacking and a wealthy family with a Nazi past.

The book is an international bestseller, so it was inevitable that someone would make this intriguing mystery into a movie. However, the Swedes beat Hollywood to it, so be prepared to read subtitles. Nonetheless, “The Girl with the Dragon Tattoo,” now playing at Plaza Frontenac, is well worth the extra effort.

There is a bit of “La Femme Nikita” and gender role-reversal in this offbeat crime tale, pairing tattooed computer hacker Lisbeth Salander (the striking Noomi Rapace), a researcher with a shady past working for a private security company, with Mikael Blomkvist (Michael Nyqvist), a journalist framed in a libel case against a powerful businessman.

With six months of freedom before he starts serving his sentence, Blomkvist is hired by an elderly, wealthy Henrik Vanger (Sven-Bertil Taube), to investigate the mysterious disappearance of Vanger’s 16-year-old niece Harriet (Ewa Frohling) in 1966.

Blomkvist got the job based on the recommendation of Vanger’s friend, the well-dressed journalist, (Ingvart Hirdwall). Frode was impressed with the computer researcher’s findings on him when the journalist’s employer explored a legal appeal.

Blomkvist begins his work aided by local policeman Gustav Morell (Bjorn Granath), but eventually, Salander is brought into the investigation.

Not simple stuff, but the story unfolds in a clear style that allows the viewer to follow every twist and revelation. The engaging plot is supported by a cast of fascinating characters. The wealthy Vanger family share control of the family business. But the Vangers are no happy family, and family secrets are at risk.

There are also twists and turns in the story, supporting the story rather than slowing it down. Sometimes we think we know where the mystery is leading, only to have new information spin the characters down a new path.

The acting is very good, with Noomi Rapace crafting a remarkable character in the brilliant, unconventional computer hacker. Her scenes with a sleazy probation officer are not to be missed. The working relationship and tentative bond between the more conventional journalist and the aloof computer hacker grows organically and is wholly convincing. Each character is fully rounded and multi-layered.

This is the kind of well-crafted, edge-of-the-seat storytelling that is too frequently seen in film and television. Intrigue, mystery and complex personalities drive this relentless tale of twists and layers of secrets.

Scenes are packed with dramatic tension and some are raw, adult stuff, although there is always an unexpected twist or twist to keep us off balance. It all adds up to a great mystery thriller, but of the kind more about information and gun-play and explosions.

Some audience members who would rush to see a movie like this if it were American-made will snub this top-notch thriller because it has subtitles.

An American version is also in the works. If the past is any indicator, the remake will not be as good, but no reading will be required. B+ - Case Marquis
University Bookstore becomes more student friendly

Features Editor

As part of an agreement and partnership between University BookStores and the University of Missouri St. Louis, the University Bookstore was remodeled over spring break to be more student friendly. Located on the second floor of the Millennium Student Center, the University Bookstore has always been the campus' headquarters for supplies, technological software, apparel, gifts, textbooks and other reading materials. With the remodeled look and new additions, UMSL St. Louis students will find there is more to offer in the bookstore than just supplies and books.

"Many of the new fixtures were recycled from other projects and were able to be put to use in St. Louis," Stephanie Eaton, supervisor of merchandising administrative services, said. "University BookStores felt that some changes would be advantageous to the campus and students and used the opportunity over spring break to make those changes." University BookStores also plans to add more shelving in the textbook department to make finding books easier for students. They also plan to reorganize the titles better.

Along with the changes to the textbook department there has also been an addition to the technology area. There are five new computers for students to use, along with a lounging area to hang out in. "There's increased merchandise selection, especially in the technology area, more streamlined checkout station, bestsellers section, $9.99 tees, iPods, computers, earbuds, gaming consoles and software are more of new merchandise offerings," Eaton said. There will also be new programs such as BTFTK (be the first to know) email exclusives, secret sales, book reservations, and textbook rental in the fall. Starting in July the book buyback program will run every day giving students the opportunity to sell back their books all year round as opposed to waiting at the beginning and end of each semester. "Because of our multi-campus business model, University BookStores is able to consolidate their buying power and provide savings for all campuses that we serve," Eaton said.

With the increased merchandise selection, students can purchase almost any electronic device including Nintendo Wii, Playstation 3, Nintendo DS, Apple iPod, and both Mac and PC desktop computers and laptops. With the student credit limit increased from $500 to $1,000, purchasing new equipment and books will be more convenient.

"I really like it ... there's a lot more space that I can see," Erica Jones, sophomore, nursing, said. "Maybe I can chill over there [in the lounging area] do homework some time just not when it's crowded." Jones was also delighted to see that the infamous bag rack has disappeared from the front entrance. Many students have experienced theft due to thieves stealing their items off the bag rack then walking out of the door.

"I like the new changes, but I hope they aren't finished," Jessica Swift, alumna, psychology, said. "It just looks like they're missing something although more space between the shelves makes it look bigger. It's definitely an upgrade from what it was, but more work is to be done."

Regardless of its appearance, with all the new additions to the University Bookstore, the benefits to students are abundant.
One of a kind on campus:
UM-St. Louis' only geologist, Michael Fix

Michael Fix: It is sort of odd being the only geologist. I kind of feel like the odd man out. I am in a department of physicists and astronomers. I do have relationships with them, and I get along well with all of them, but it is a little lonely not having any colleagues in my own field to interact with on a daily basis. But, that's just the way it is, I've got to accept that. I don't want to come across like I'm complaining or anything, but it does feel a little funny sometimes.

TC: How long have you been teaching? What is your favorite part about teaching?

MF: I've been teaching here since 1976. It's something I enjoy doing. A lot of jobs, people do it because they have to, not because they enjoy it. You get to interact with a lot of people. You get to meet a lot of interesting and nice people. I learn things from my students, just as they learn things from me. I enjoy introducing people to things they hadn't known about before.

TC: How did you decide to become a geologist?

MF: When I was a student at Florissant Valley Community College, way back in '68-'69, I took introductory level geology class there. And, I liked it. I've been interested in science since I was a little kid. At first, I thought I was going to be an astronomer. [Junior college] was really when I got put specifically on the path I'm on now.

TC: What is something you are really interested in besides geology?

MF: I love music. If I'm in my office, I usually have music playing. I have a wide range of types of music—rock, classical, some jazz, folk, all kinds of stuff. And I like movies, especially science fiction. As far as hobbies, I don't have a lot of time for hobbies, with all the work that I have. When I'm not working for the school here, if I happen to have free time, I'll go to the movies, watch TV, maybe I'll read a book [or] listen to music. I recently got an iPod touch. I love it.

TC: Can you tell us a little bit more about the Dinosaur Dig project you participate in?

MF: Our dig is the one that has been done in a completely scientific fashion. We have a greenhouse we put up, it's 20 by 36, I think [for fossil examination]. For a 10 year period, we've been excavating. We've found more dinosaur remains, like part of the skull of the Missouri dinosaur. I haven't done any digging at the site in quite a long time since the collapse of the greenhouse. When it was active, we'd be going down there, sometimes more than once a month.
Safe Walk report
Lighting targeted as main safety concern

Full text available.
Thursday night, the Japan America Student Association brought Japanese culture to the MSC Pilot House. JASA had an Enka (traditional Japanese ballad) performance, an Ikebana (flower arrangement) demonstration, and a Taiko performance (rapid drumming).
The new Outlook Live account is a bust

During Spring Break, the University of Missouri-St. Louis launched the new student emailing system, Outlook Live. All of the University of Missouri campuses have teamed up with Microsoft to provide students with this new email solution which includes a Windows Live account with an @mail.umsl.edu address, 10 GB of storage, and the ability to keep the email account after graduation. Additional Windows Live services include SkyDrive, Groups, Messenger, Photo, and Microsoft Office Live Workspace. The new system went live late last year, and students had from then until March 29 to switch over. On April 1, the University's Information Technology department switched over 15,000 old email accounts to the new system for those who failed to opt-in before the deadline.

On the ITS department website it states that any mail sent to the old @umsl.edu addresses will not bounce and continue to be delivered until the student graduates, but instead those emails are cleared by the exchange architecture and sent to Microsoft for delivery. If any students are subscribed to a Listserv, it may be up to date with the new Outlook Live address, so it will have to be set up again.

While the benefits to this new email system sound enticing, the transition has not been smooth at all. For those who opted into the new system early discovered that they were not able to access their student emailing system at all, not even on the old one. That problem was eventually fixed, but now there have been issues sending and receiving mail. Students find that emails they have sent out from their new Windows Live account do not get to the recipients, while they have not been receiving emails either. It has been determined that this issue is only happening at random but that is not comforting to know, especially since there is still a possibility that one of those random emails could be important.

We at The Current believe that the new Outlook Live emailing system is horrible. It is hard to enjoy a new email account with bells and whistles when it does not completely work right. On the ITS department website they mentioned that they chose to switch to the new program in the middle of the semester because “there is never a perfect time to migrate to a new system,” but we disagree. The university should have waited until the Summer semester to make the switch, therefore less students would have been affected by its lack of function. At the very least the switch could have been made after finals week. With the switch taking place during midterms, many students may have never received important correspondences from their professors, email alerts about their grades, or any other important information. For those students who work on campus and depend on the emailing system to communicate with colleagues, that fell short as well. Switching an entire emailing system and then waiting to see if things work out is not the appropriate way to go about things. Outlook Live should have been tested over and over until all the kinks were discovered and fixed, then offered to the students.

For now it's a waiting game to determine whether things will work out, and we're sure they will, but this is one flub that the university could have avoided.

Army Slaughter of civilians is on our hands, in our minds

Last week, WikiLeaks released a video that was 17 minutes and 47 seconds long. During those long minutes, the viewer is witness to the wholesale slaughter of Iraqi civilians by U.S. occupying forces.

The footage, recorded in 2007, shows a U.S. forces Apache helicopter intentionally firing on a group of a dozen or so Iraqi civilians. Included in the group are Namir Noor-Eldeen, a photographer from Reuters, and his driver, Saeed Chmagh.

The most damning part of the video is the audio attached to it, showcasing the back and forth between the Apache pilot, gunner, ground elements and command.

After mistakes Namir's camera for a Rock- et-Propelled Grenade launcher, the Apache requests permission to open fire. The request is granted, and the Apache launches up the square, throwing up dust and cutting down the group in a hail of bullets.

Chmagh survives the initial onslaught and tries to crawl away. This is where things go from bad to worse.

"Come on, buddy, all you gotta do is pick up a weapon," says one of the helicopter's occupants, implying that if they think that he has or is going for a weapon, they will open fire again.

Minutes later a van pulls into the square, and two men begin to try and load the bodies into the vehicle. The Apache again asks for permission to fire, and permission is again granted—though this time, no weapons or anything that could be mistaken for a weapon is visible.

The van is ventilated as the heavy machine-gun rips into it, killing the occupants and the men trying to help. By this time, the square is littered with 14-15 bodies.

"Oh yeah, look at that," the gunner says enthusiastically. "Right through the windshield! Ha ha!"

The Apache ceases fire as U.S. ground elements arrive to clean up. At first, the square is so full of bodies that a Bradley tank driver says he is not able to drive into the area.

Another driver does anyway, rolling the tank over a body as he does. "I think I just drove over a body," he jokes. "Really?" asks someone else, chuckling. "Yeah!" the driver responds, laughing himself.

It is only later that two children are found in the van, seriously injured. The Army medics recommended them be taken to the nearest U.S. base for treatment. Someone on the radio overrides that order, telling them to take the children to a local hospital.

"Well it's their fault for bringing their kids into a battle," someone mouths off over the radio. "That's right," his buddy responds.

This kind of behavior and action from our soldiers are unacceptable and inexcusable. This blatant lack of respect for human life is alarming and absolutely disgusting. No wonder many Iraqis hate us so much.

The phrase "The War on Terror" is misleading. We're not fighting terror—you cannot fight a concept, a notion. We're fighting people, and in our haste to "protect" ourselves from this "foreign threat," we're ending the lives of innocent civilians.

The argument that as civilians ourselves, we cannot know what it is like to be over there, is wrong. We may not have combat experience, but it is not that hard to tell from the WikiLeaks video what went down.

Those people were not insurgents or terrorists. There were regular people, and they were shot down by hotshot cowboys. Those cowboys thought that they were on their own, but the military has wrought in our name since the beginning of this war. Abu Ghraib, Guantánamo Bay, and especially this newly-uncovered Baghdad Slaughter.

The amputated body is visible. The driver, Chmagh, remains on his knees. The helicopter remains on the roofs, killing those who try to help. The driver, Chmagh, remains on his knees. The helicopter remains on the roofs, killing those who try to help. The driver, Chmagh, remains on his knees.
Are you tired of Tiger?
Please get Woods off my television set

I often wonder what life would be like without Tiger Woods news—walking into a grocery store without seeing his face and his mistresses plastered all over the magazine covers, or being able to watch television without seeing him perform yet another press conference about how his actions.

At the beginning of this week, regular television was interrupted so that the press could take the opportunity to ask him the questions that people would want to know. Intelligent questions were asked, like whether his current situation would affect his playing. Considering that he has won numerous golf games, one would assume he has learned to separate his personal life from the game.

It is amazing how movie stars and rappers are expected to step off their relationships on various occasions and the public is supportive, usually siding with one of the women involved—Angelina vs. Jen Aniston comes to mind. The men are glorified as the ultimate player. But, when it comes to athletes like Kobe Bryant, Shaq, etc., people are in absolute shock.

Maybe it is because the ambition to become a professional athlete rather than a movie star seems more realistic for the average person. In order to see one’s favorite athlete in person, they would never have to buy a ticket to his or her game. However, to get close to a celebrity, one has to get through their security first.

So, making this connection, housewives and some married men are making comments like “he is supposed to be a role model,” or “it is a shame that my kids and grandchildren are not able to look up to him.”

First off, the children should never have looked up to an athlete or celebrity in the first place. The parents are supposed to be their role models. Athletes are humans as well. This is reminiscent of the housewives at home crying about Britney Spears and her impact on their daughters. Other things do factor in to the way that a child is brought up.

The news media should be focusing on what is happening with our government, and on answering questions about what is going on with health care. There are young people and adults who have no idea what the health care involves. People are willing to complain about ideas when it is coming from the opposing party without knowing the facts.

We also need to know what is happening with Haiti. They had the charity music benefits on television and around the country for nearly two weeks, but now that the cameras have turned another direction, it feels like the majority of the U.S. has forgotten.

I actually do not remember seeing any functions going on for Haiti. It was like the charity music benefits on television and around the country for nearly two weeks, but now that the cameras have turned another direction, it feels like the majority of the U.S. has forgotten.

In my opinion, morel mushroom hunting is one of the best things about living in this area. Many people who fish or hunt do so for the excuse to be outdoors, alongside a sparkling stream or hiking through the woods. Hunting for morel mushrooms is just such an excuse, with the bonus of being out in the woods in the early spring when the weather is mild, trees are just budding and early wildflowers are popping up.

I actually do not remember seeing any functions going on for Haiti. It was like the charity music benefits on television and around the country for nearly two weeks, but now that the cameras have turned another direction, it feels like the majority of the U.S. has forgotten.

In my opinion, morel mushroom hunting is one of the best things about living in this area. Many people who fish or hunt do so for the excuse to be outdoors, alongside a sparkling stream or hiking through the woods. Hunting for morel mushrooms is just such an excuse, with the bonus of being out in the woods in the early spring when the weather is mild, trees are just budding and early wildflowers are popping up.

Incredible harassment leads to student suicide

When "Don't Ask, Don't Tell" is brought up in conversation, it usually refers to the military's controversial gay closeting policy. If you thought DADT only applied to our men and women in uniform, think again.

There's another application for DADT: high school.

Thanks to DADT, a high school girl recently killed herself. High schools around the nation seem to have taken the stance that on issues between students, the teachers and administration don't ask and the students don't tell.

This means that often, bullies reign supreme in the hallways and classrooms. This kind of atmosphere of hopelessness breeds situations that can lead to terrible endings, such as one school in South Hadley, Mass., found out.

Freshman Irish transfer student Phoebe Prince killed herself in January after being mercilessly subjected to endless ridicule and bullying by some of her classmates.

Her crime was simply "briefly dating a popular senior football player in her first freshman weeks at the school," an article on NYDailyNews.com said.

The eternal stereotypical "mean girls" at the school—that is to say, the clique of popular older girls—took it upon themselves to take vengeance on Prince for some perceived wrong.

She was subjected to bullying beyond the scope of imagination. The bullies got other students to knock books out of her arms during school, throw things at her and send her threatening text messages.

The online world wasn't a refuge for Prince, either, with her classmates taking to Facebook, Twitter, Formspring, and Craigslist to call her all manner of things, from "Irish slut" to "whore" and everything in between.

The "mean girls" even became so bold as to verbally assault Prince in the school library, in the full presence of other classmates and a faculty member, who witnessed it and yet said nothing to stop it.

"Why did no one do anything to stop this atrocious behavior? The sad fact is that high school bullying has become generally accepted, with parents and teachers typically shrugging it off as something "that just happens," or something "that every high-schooler goes through" or even the terrible "it is just kids being kids."

Any bullying is unacceptable, but the scope of what Prince was subjected to is so far and beyond the typical high school experience that it led to her taking her own life just to be free of it.

The day she killed herself, she had been walking home from school when a passing car filled with her tormentors slowed down to throw a can of Red Bull at her.

She finished walking home and hung herself in the stairwell leading to her parent's second-floor apartment building. Her sister found Prince's body later, still wearing her school clothes.

However, it was not over yet. The bullying continued after her death, with some of her bullies posting "vicious" comments on [Prince's] Facebook memorial page," the same NY Daily News article said.

This is not the first time something like this has happened, and it sadly will not be the last time. Bullying is a major problem, and one that needs to be addressed on not only a local scale, but a national one as well. It is not too hard to see that bullying may be one of the primary causes for both school shootings and teenage suicide.

Thankfully, Prince's abusers are being brought to justice. Six of her classmates have been brought up on charges including "criminal violation of civil rights with bodily injury, criminal harassment and stalking," the NY Daily News said. Two male students have also been charged with statutory rape.

That last sentence is perhaps the most damning. There is a lot more to what happened to Prince than investigators have revealed, and I for one am not sure I want to know everything that occurred.

What is perhaps the most heartbreaking about this story is that if someone, anyone had taken action against these monstrous boys and girls, Prince might have not killed herself.

No one can say for sure, but things may have turned out differently if the faculty member who witnessed Prince's abuse had said something to stop it instead of staying silent. Knowing that something would be done about her harassers might have changed her mind.

But now, we will never know.

LETTER TO THE EDITOR

Dear Editor:

When reading Andy Philipps' column on the Tea Party protest movement in the March 22 issue of The Current, I was struck by the irony of his message about the protestors. Citing scenes of deplorable behavior toward elected officials, Philipps refers to the Tea Party as being "bigoted" in nature and equates them with Nazis. While Philipps allows that the basic objections of the Tea Party Patriots are legitimate and worth of consideration, he also sums up the entire group as being wholly composed of terrible, reasonless savages.

It seems to me a hypocrisy to refer to the Tea Party as bigoted while casting aspersions upon them with a wide brush. Is it not bigotry to write the whole lot off as idiotic, immature, and uneducated simply because they subscribe to a specific political movement? There is nothing inherently wrong with the protestors' message—their displeasure with the intrusion of government in their private lives, and the unnecessary expansion of federal control over a normally private part of one's life: healthcare. Their views should be heard in the debate for healthcare reform, as with all opinions. However, just because we see so many of the worst examples of Tea Party protests on the news does not mean that everyone single Tea Party Patriot is beyond civility. Likewise, a few horrendous Republican or Democrat protests do not criminal organizations make.

When passing judgment on these people, carefully consider the assumptions we are tempted to make about them. In any movement, the most vocal members tend to be the least accurate representation of the group overall. The real bigots are those who believe the Tea Party to be without redeeming qualities and undeserving of participation in democratic debate based on a few authentically despisable individuals.

Sincerely,

Erin Richy

Student ID's
more harm than good?

As soon as I walk to campus for classes, I must now make a mental note to slip on a lanyard that displays my student ID in a clear plastic holder. You see, as a social work major, I have been chosen along with the rest of the social work student and faculty members to be a part of an experiment on campus. The University of Missouri-St. Louis is testing to see if security and safety on campus will be increased by students and faculty wearing ID badges.

When first hearing of the proposal, I had flashbacks to the last day of public high school, in which the image of burning and basting the required ID I had worn since eighth grade consistently ran through my thoughts, and was a very possible reality that was to occur. Since then, the thoughts of IDs around my neck causing a horrible lack of uniqueness, infringements on my "given rights" as an "adult," and other teenage hormonal rants have calmed down. Looking around in the world of employment, many businesses now require some form of identification on their employees for safety measures.

With that being said, the fact that UM-St. Louis wants to improve security on campus is great, especially in light of the violence that took place on campus just last semester. I applaud the university for noting this and taking steps for its population to be further protected.

However, are ID badges the right step to further protect us?

First and foremost, the School of Social Work holds a comparatively small population in size. It is understandable, to an extent, that perhaps the school of social science

The harm of porn part II: Addiction and erectile difficulties

Because of extramarital affairs, former president Bill Clinton, actor David Duchovny and pro-golfer Tiger Woods have either admitted to or been suspected of having sex addictions.

While the attention given to this specific symptom of sex addiction has brought to light the real-life struggles faced by addicts and their families, many other forms or symptoms of sex addiction are not as openly discussed, such as pornography.

Combined with masturbation, which releases pleasure chemicals, the sexual intensity of watching porn can become unmatched by anything else experienced by the user, including real sex. Use of pornography, like drugs, alcohol or food, is not in and of itself going to be a problem for everyone. However, the availability of porn on the Internet has led to a sharp increase in the number of people who suffer in silence with this addiction—known as sexual compulsivity within the field of psychology—with some reports showing that nearly half of all sufferers are women.

Dr. Helen Friedman is a clinical psychologist in full-time private practice in St. Louis, Mo., with over 27 years of experience working with sexual trauma and sexual compulsivity. "Cybersex is affordable, anonymous, and easily accessible," Dr. Friedman wrote in her 2000 article "Shame is 'King' in Sexual Compulsivity."

It is considered to be the crack cocaine of sexual compulsivity, because it can quickly escalate the progression of the disorder.

Dr. Friedman is a board member of The Society for the Advancement of Sexual Health (SASH.net, available in English and Spanish). SASH provides helpful information to men and women, heterosexuality and homosexuality, who are concerned about the negative effects of sexual activities on their lives.

SASH states that the three hallmarks of sex addiction are: loss of control, significant consequences resulting from the behavior, and constant thinking of the behavior, even when the person does not want to.

Many users admit that, even when having sex with people they are highly attracted to, they are unable to focus on the moment due to the rapid succession of pornographic images from videos they have seen. To make matters worse, it can lead to erectile difficulties.

Inability to get or maintain an erection can cause both men and women to feel inadequate.

One way many men fight to keep erections is by focusing on the images and possibly transforming these images by enacting some of what they have seen in porn by reducing their partners to objects and focusing on their own desires. This can be done through the use of derogatory name-calling, slapping, choking and other methods used to control one's partner. While power play can be a fun part of healthy sexual activity, inability to perform without it can signify a problem.

Stevens' retirement highlights politicization

THE PHIPPS PHACTOR

Although he was appointed by a republican president, retiring associate Supreme Court Justice John Paul Stevens is today considered to be a liberal on a conservative court. But that statement would be one that Stevens would take offense to, and why this is points to something disappointing about our political culture.

In 1975, the year that Justice Stevens was nominated and confirmed, the words liberal and conservative were used almost academically to identify certain political ideas, but they were not labels. They carried with them all of the weight as any other adjective would. They definitely did not apply to something as arcane, twisted and final as judicial philosophy. Although even then one might have called the Warren court's decisions more liberal than those of the Burger court that preceded it, it was merely an academic comparison and nothing more.

When Stevens was nominated by Gerald Ford to sit on the court, his decision was not based on Stevens' political views or loyalty to a political philosophy but rather, it was one based on his aptitude as a judge and his knowledge of the law and constitution. When Stevens sat through his confirmation hearings in the Senate, he was not asked about his opinions on abortion or gun control outside of the context of the law. The senators who voted to confirm him did not view their votes as any kind of political statement, they merely saw them as an affirmation for or against this person's ability to do his job faithfully.

See STEVENS, page 23

From ID, page 19

Work was chosen for the experiment because of its location at Belleveille Hall, a building isolated from most others. However, because of how comparatively few people attend this particular college, this experiment may not show the most accurate results since most everyone recognizes one another without the IDs anyway. Most of the time, when someone unfamiliar enters the building, it is obvious. Would it not make more sense to test this idea on a somewhat larger population?

Second of all, would requiring the campus populace to wear IDs really make the campus safer? Sure, something that identifies a group might have slight possibilities of spotting an "outsider." But a problem with this idea is the visitors on campus. Recruiting for the college, visitors constantly come in and out. In addition, several people who live around the boundaries of campus often walk through or take a jog around the area. These people would not have IDs. To what extent would IDs be required?

Besides that, student IDs would be displayed for all to see. Since our student numbers are on our IDs, some form of identity theft could ensue. Several students use their cards as a line of credit within the school, and our numbers are used to hold school records. Also, in the social work experiment, access to the building will be granted with the card after-hours. If someone were to lose their student ID, would it not have the potential for the campus to be even less safe?

In high school, it makes more sense to brand IDs on student and faculty. Maybe looking at the security rates of high schools is what sprung the idea for college campus security measures. The university needs to take note, though, that it is generally a small and distinguishable enough community anyway, and that in addition to IDs, securing the campus is easier in the grander scheme of things. In college, diversity is more prominent. These days, race, age, and gender vary so greatly, anyone seen on campus just as likely to be a student as the next person.

If the university wants to increase security and safety, there are several other options besides wearing IDs. More lighting and emergency poles could be placed, a smaller station for campus police could be placed on South Campus, or video cameras could be installed inside and outside of buildings. Other than that, UM-St. Louis could increase protection and prevention programs, such as self-defense classes.

Overall, UM-St. Louis does a generally fair job of keeping the campus safe. Granted, there are cases obviously beyond control at times, but compared to other schools, UM-St. Louis is pretty safe. But wearing IDs around our necks actually might weigh harm over good. Jen O'Hara is a Staff writer for The Current.

CHOPIN, from page 12
A fitting finale, this piece varied from slow, melodic tunes, to rapid note progressions that brought several audience members to attention.

"Chopin may have only lived 39 years, but his works will never die, much less be forgotten, as they possess and intrigue the entire spectrum of human emotion," Voskoboynikova said prior to the concert’s start.

Even those without strong passion for piano music could easily understand and appreciate this claim, having attended the Spring Piano Students Concert.

Chopin’s works vary greatly, from slow to fast, from long to short, and from any emotion you can think of to the next.

To anyone who have never experienced piano music, looking into Chopin’s repertoire may be a good start.

A+ —Matthew B. Popsky

KOUYATE, from page 10
The musicians’ movements made it apparent that musicians are the same all over the world, and that no matter where one is in the world, one will always find a love of music.

At one point after a standing ovation, toward the end of the concert, the crowd was encouraged to dance along with the group. This was not hard to do, considering the crowd previously had been invited to sing along with the group.

Bassekou led the men, and his wife Ami, the “Tina Turner of Mali,” led the women. It was fun and made for a great atmosphere of unity and happiness.

This performance was enchanting and engaging. Not only did the crowd get to enjoy the talent, but the talent got to enjoy the crowd.

The music was bouncy and energetic, and so were the musicians and the crowd. It was with reluctance that everyone stood and clapped for the last time for Bassekou Kouyate and Ngoni Ba; they did a phenomenal job.

Hopefully they will come back soon, and once again enchant an audience at the Touhill.

A+ —Amanda Roach

people to the judiciary has been a politicized process ever since.

Since then, the nomination of a Supreme Court justice has become a political event and the court has become more and more politicized.

Any time a vacancy opens, both sides reach for their guns and begin loading the political ammunition with either side believing that they have something to lose depending on who the president is, which party controls the senate and who the nominee is.

The lawmakers themselves take part in this maneuver, as we saw last year when President Obama nominated Sonia Sotomayor to a vacancy on the court. Even though Judge Sotomayor had the qualifications to be a prudent justice based on her substantial tenure as a federal judge, republican senators spent their time trying to paint her as a partisan who would let her sex and ethnicity override her judgment of the law. Even worse yet are the examples of this that the Bush administration provided us, with our previous president nominating his personal lawyer, Harriet Meyers, to a vacancy in order to place an ideologue on the court, not just to serve his own agenda but that of his party and the conservative movement they represented.

Even though there has been this politicization of the process, it has historically never been very effective on the process.

Although the Bork nomination failed, Reagan succeeded in getting a "liberal" senate to confirm Antonin Scalia, who is viewed as being conservative, to the Supreme Court.

And even though those on the right have long opposed the Roe v. Wade decision that made abortion illegal and conservative politicians have vowed to nominate people to the judiciary to reverse the decision, and even succeeded in doing so, they have been unable to reverse the decision.

However, the departure of Justice Stevens from the bench demonstrates not only how much things have changed, but how much our process loses in the absence of individuals like him in our government.

Stevens would never describe himself as a conservative or a liberal, but rather as a judge who passed judgment on cases based solely on his understanding of the letter of law.

He has never sought to serve an ideologue, but only the good of his fellow citizens.

In the face of his retirement, if there were ever a time for such level headedness like that in government, it is now.

Left untreated, the user's sex addiction can take on new forms, such as sexual abuse of a partner.

An online search for "porn addiction and erectile dysfunction" reveals that this is a real problem for many people. From WebMD to Christian-based sites to public discussion forums, experts and addicts alike are sharing the problems surrounding pornography addiction as well as solutions and suggestions to help users overcome it.

On Sept. 1, 2006, on the Men's Health discussion forum of Medhelp.org, a 28-year-old man shared his worries that his use of pornography was the cause of his erectile problem. Over 50 people have responded, the most recent of which was received last month. The general consensus was first and foremost to stop looking at porn—the same solution offered by experts in the fields of psychology and sexual health. Shame and humiliation regarding the actions of addicts are legitimate concerns, but it can be debilitating for sex addicts who are too embarrassed to seek help. SASH has links to numerous articles and book titles that can be read in private. Amazon.com has the option of allowing readers to read a few pages of many of their books so that consumers can make informed choices about what to order. A book that has proven extremely helpful to a friend is "Treating Pornography Addiction: The Essential Tools for Recovery," by Dr. Kevin B. Skinner, and Dr. Friedman recommends "Out of the Shadows: Understanding Sexual Addiction," by Patrick Carnes.

Anyone concerned that the watching of pornographic videos has become out of control may want to stop watching for a few days to see what happens. Users will often have withdrawal symptoms, such as irritability and intense mental preoccupation with porn. If this happens, taking advantage of the numerous online and literary resources or talking with non-judgmental professional can give much needed support and guidance.
