Opening a New Connection

After opening JellyfiSSH, a new window called “JellyfiSSH 4.4” should appear.

In order to connect to a server, you will have to enter some information:
First click on New button. This window will appear.

1. **Bookmark**: For an on campus connection you can select a server from the dropdown menu that has already been setup (admiral, jinx, or local) or you can set up your own one
2. **Bookmark Title**: Type in this textbox if you don’t want to use the default Bookmarks (such as an off-site campus connection)
3. **Hostname or IP**: provide the server name or you can type in the IP address.
4. **Login name**: For an on-campus connection, enter your SSO ID
5. And then click Add.
6. If you choose from bookmark from the drop down menu, just click on Connect.
