

Contents

1	Introduction	1
1.1	Early Experiments	1
1.2	Early Theory	11
1.3	Units	24
1.4	Retrospective	26
1.5	References	26
	Problems	26
2	Elementary Wave Mechanics	28
2.1	What Is Doing the Waving?	28
2.2	A Gedanken Experiment—Electron Diffraction Revisited	28
2.3	The Wave Function	29
2.4	Finding the Wave Function—the Schrödinger Equationö	30
2.5	The Equation of Continuity	33
2.6	Separation of the Schrödinger Equation—Eigenfunctions	34
2.7	The General Solution to the Schrödinger Equation	36
2.8	Stationary States and Bound States	39
2.9	Characteristics of the Eigenfunctions $\psi_n(x)$	39
2.10	Retrospective	46
	Problems	46
3	Quantum Mechanics in One Dimension—Bound states I	49
3.1	Simple Solutions of the Schrödinger Equation.	49
3.2	Penetration of the Classically Forbidden Region	74
3.3	Retrospective	82
3.4	References	82
	Problems	82
4	Time-Dependent States in One Dimension	87
4.1	The Ehrenfest Equations	87
4.2	The Free Particle	89
4.3	Quantum Representation of Particles—Wave Packets	90
4.4	The Harmonic Oscillator Revisited—Momentum Eigenfunc- tions	97
4.5	Motion of a Wave Packet	100
4.6	Retrospective	112
	Problems	112

5	Stationary States in One Dimension II	116
5.1	The Potential Barrier	116
5.2	The Potential Step	125
5.3	The Finite Square Well—Bound States	128
5.4	The Morse Potential	136
5.5	The Linear Potential	146
5.6	The WKB Approximation	152
5.7	References	173
	Problems	173
6	The Mechanics of Quantum Mechanics	177
6.1	Abstract Vector Spaces	177
6.2	The Eigenvalue Equation	186
6.3	The Postulates of Quantum Mechanics	196
6.4	Relation Between the State Vector and the Wave Function	208
6.5	The Heisenberg Picture	209
6.6	Spreading of Wave Packets	214
6.7	Retrospective	223
6.8	References	223
	Problems	223
7	Harmonic Oscillator Solution Using Operator Methods	226
7.1	The Algebraic Method	226
7.2	Coherent States of the Harmonic Oscillator	235
7.3	Retrospective	242
7.4	References	243
	Problems	243
8	Quantum Mechanics in Three Dimensions—Angular Momentum	246
8.1	Commutation Relations	247
8.2	Angular Momentum Ladder Operators	248
8.3	Vector Operators	253
8.4	Orbital Angular Momentum Eigenfunctions—Spherical Harmonics	256
8.5	Another Form of Angular Momentum—Spin	269
8.6	Addition of Angular Momenta	281
8.7	The Vector Model of Angular Momentum	301
8.8	Retrospective	303
8.9	References	304
	Problems	304
9	Central Potentials	308
9.1	Separation of the Schrödinger Equation	309
9.2	The Free Particle in Three Dimensions	315

9.3	The Infinite Spherical Square Well	319
9.4	The Finite Spherical Square Well	320
9.5	The Isotropic Harmonic Oscillator	327
9.6	The Morse Potential in Three Dimensions	351
9.7	Retrospective	356
9.8	References	356
	Problems	357
10	The Hydrogen Atom	360
10.1	The Radial Equation—Energy Eigenvalues	360
10.2	Degeneracy of the Energy Eigenvalues	365
10.3	The Radial Equation—Energy Eigenfunctions	367
10.4	The Complete Energy Eigenfunctions	373
10.5	Retrospective	376
10.6	References	376
	Problems	376
11	Angular Momentum—Encore	379
11.1	The Classical Kepler Problem	379
11.2	The Quantum Mechanical Kepler Problem	381
11.3	The Action of \hat{A}_+	385
11.4	Retrospective	386
11.5	References	387
	Problems	387
12	Time-Independent Approximation Methods	388
12.1	Perturbation Theory	388
12.2	The Variational Method	403
	Problems	406
13	Applications of Time-Independent Approximation Meth-	
	ods	410
13.1	Hydrogen Atoms	410
13.2	Spin–Orbit Coupling and the Shell Model of the Nucleus	423
13.3	Helium Atoms	425
13.4	Multielectron Atoms	435
13.5	Retrospective	442
13.6	References	442
	Problems	443
14	Atoms in External Fields	445
14.1	Hydrogen Atoms in External Fields	445
14.2	Multielectron Atoms in External Magnetic Fields	457
14.3	Retrospective	461
14.4	References	461

Problems	461
15 Time-Dependent Perturbations	463
15.1 Time Dependence of the State Vector	463
15.2 Two-State Systems	465
15.3 Time-Dependent Perturbation Theory	471
15.4 Two-state Systems Using Perturbation Theory	473
15.5 Extension to Multistate Systems	478
15.6 Interactions of Atoms with Radiation	483
15.7 References	498
Problems	498
A Answers to Problems	500
A.1 Chapter 1	500
A.2 Chapter 2	500
A.3 Chapter 3	502
A.4 Chapter 4	504
A.5 Chapter 5	504
A.6 Chapter 6	505
A.7 Chapter 7	505
A.8 Chapter 8	506
A.9 Chapter 9	507
A.10 Chapter 10	507
A.11 Chapter 11	508
A.12 Chapter 12	508
A.13 Chapter 13	509
A.14 Chapter 14	510
A.15 Chapter 15	510
B Useful Constants	511
C Energy Units	512
D Useful Formulas	513
E Greek Alphabet	514
F Acronyms	515
G Γ-Functions	517
G.1 Integral Γ -Functions	517
G.2 Half-Integral Γ -Functions	517
H Useful Integrals	518
I Useful Series	519
