RESEARCH STATEMENT AND PHILOSOPHY

My research objective is to provide significant intellectual contributions to the field of supply chain management. I believe the best method for accomplishing this is to study, conduct, and publish research beneficial to both academics and practitioners. My primary research focus is supply chain risk. Topic areas I research in relation to supply chain risk and its management are supply risk assessment and resilience, supply continuity planning, commodity price volatility, foreign exchange risk, supply chain integration, corporate social responsibility, and innovation. The techniques I use in my research include case studies, survey instruments, and theory development informed through theoretical frameworks such as agency theory, transaction cost economics, the resource based view of the firm, and institutional theory. The information obtained from my research informs me of the most recent trends in supply chain management, and these insights are shared with scholars, students and practice.

ACADEMIC LEADERSHIP
