Debugging in C/C++ using GDB

Worried about doing poorly on C or C++ projects? Always getting stuck on tasks and having trouble completing them? I will help solve these problems for you by giving a talk on a powerful debugger, GDB!

This talk will begin with a presentation of basic debugging in C/C++ using the GDB debugger. We will then move to more advanced debugging techniques using GDB. These techniques will include ones useful for debugging programs using multiple interacting processes.

Zoom talk: 2/19/2021

The talk will be held on Friday, February 19th from 4pm to 5pm.

https://umsystem.zoom.us/j/7220694685

This talk is open to all students of UMSL with interest in debugging and computing in general. The talk should be understandable for anyone with an introductory knowledge of C or C++.
