

# Logistics and Supply Chain Management, Graduate Certificate

## Program Description

The Graduate Certificate in Logistics and Supply Chain Management provides a focused and intensive study of important topics in supply chain management, including procurement, production, operations, logistics, and transportation. Students first get introduced to the foundation and basic concepts of supply chain management. They then take in-depth studies into domain topics of global supply chain management, strategic sourcing, and supply chain integration, in conjunction with analytical methodologies for various data-driven decision-making functions in supply chains, including facility location and layout, production planning, inventory control, scheduling, and vehicle routing. The program is suitable for candidates with undergraduate or graduate education other than supply chain management. It is also suitable for professionals whose primary responsibility is in other business functions (e.g., finance, marketing, information system, accounting); but who wish to broaden their scope of knowledge and training in supply chains.

This 12-credit hour certificate program may also count toward an MBA degree program with the Management, and Operations Management Emphasis.

## Admission Requirements

Applicants must meet the general University of Missouri-St. Louis Graduate School admissions requirements.

## Certificate Requirements

All course prerequisites and all course waivers are applicable. Substitute courses may be approved by the appropriate department chairperson and the Director of Graduate Business Programs.
