Introduction to Python for the Data Sciences

Python is becoming a very popular language in data science. This is due to a combination of its ease of use and the large number of powerful libraries that it has available.

Adjunct faculty member Matthew Lane will be giving a talk going over the basics of Python and how you can quickly use it to leverage the power of its many libraries. The talk will begin with a presentation of the basics of Python. Once the basics are covered, the Python libraries Numpy and pandas will be covered, both which are often used in the data sciences.

Meeting and Talk: 10/2/2019

The talk and meeting will be held on Wednesday, Oct 2nd, 2019 in ESH 304 from 4:30 to 5:30 pm.

This talk is open to all students of UMSL with interest in Python and computing in general. The talk should be understandable for anyone with some introductory knowledge of a programming language.

Refreshments will be provided.
